

# The Power of Growth

# Factbook “Gazprom in Figures 2010–2014”

## Preface

Gazprom in Figures 2010–2014 Factbook contains information and statistics prepared for the annual General Shareholders Meeting of OAO Gazprom in 2015. The Factbook is based on OAO Gazprom's corporate reports and information derived from Russian and foreign information publications.

The term "OAO Gazprom" as used in this Factbook refers to the parent company of *Gazprom Group*, i.e. to Open Joint Stock Company Gazprom. The terms "*Gazprom Group*", "the *Group*" or "*Gazprom*" imply OAO Gazprom and its subsidiaries taken as a whole.

Similarly, the terms "*Gazprom нефт Group*" and "*Gazprom нефт*" refer to OAO Gazprom нефт and its subsidiaries, "*Gazprom energoholding*" refers to OOO Gazprom energoholding and its subsidiaries, "*Gazprom neftekhim Salavat*" refers to OAO Gazprom neftekhim Salavat and its subsidiaries. In this Factbook, "companies investments into which are classified as joint operations" define OAO Tomskneft VNC and Salym Petroleum Development N.V.

*Gazprom's* overall results as stated in the Factbook are recorded in compliance with the principles for preparing *Gazprom Group's* consolidated financial (accounting) statements in accordance with the requirements of the Russian legislation (hereafter, the "RAS consolidated financial (accounting) statements") / *Gazprom Group's* consolidated financial statements prepared under IFRS (hereafter, the "IFRS consolidated financial statements") and/or for the whole of *Gazprom Group* companies included for the purposes of *Gazprom Group's* RAS consolidated financial (accounting) statements / IFRS consolidated financial statements. Some figures of OAO Gazprom and its subsidiaries were derived from management accounts. Figures calculated using these methods may differ due to differences in methodologies for preparing consolidated financial statements and maintaining management accounts.

Figures representing tonnes of oil equivalent (t c.e.) or barrels of oil equivalent (boe) were calculated using the specified conversion ratios. The *Group* maintains its management accounts in metric units.

The *Group's* financial results are derived from *Gazprom Group's* RAS consolidated financial (accounting) statements and IFRS consolidated financial statements. *Gazprom Group's* accounting (financial) statements are expressed in Russian rubles. Equivalent amounts in USD and EUR were calculated at the specified exchange rates and do not represent the *Group's* financial statements data.

\* Before April 2011 1 ADR provided a right for 4 ordinary shares of OAO Gazprom. Since April 2011 onwards 1 ADR provides a right for 2 ordinary shares of OAO Gazprom.

\*\* Market capitalization based on MICEX share price converted into USD.

\*\*\* For 2014 — recommended dividends.

\*\*\*\* The Government of the Russian Federation is controlling over 50% of OAO Gazprom.

\*\*\*\*\* The Bank of New York Mellon issued ADRs on OAO Gazprom's shares.

Comparison of price dynamics OAO Gazprom's ordinary shares at Moscow Stock Exchange and ZAO Micex Stock Exchange in 2010-2014 with MICEX index

### Main differences between Russian Reserves System and International Standards

*Gazprom's* hydrocarbon reserves are estimated using both the Russian reserves system and international methodologies developed as part of the Petroleum Resources Management System (PRMS Standards) and by the US Securities and Exchange Commission (SEC Standards).

PRMS was approved by the Society of Petroleum Engineers (SPE), the World Petroleum Council, the American Association of Petroleum Geologists, and the Society of Petroleum Evaluation Engineers in March 2007. PRMS, a new international reserve evaluation standard replaced SPE definitions published in 1997. Independent petroleum engineering companies have been auditing *Gazprom's* reserves in accordance with the international standards since 1997.

The Russian reserves system differs significantly from the international standards in particular with respect to the manner in which and to the extent to which commercial factors are taken into account in calculating reserves.

### Russian Reserves System

The Russian reserves system is based solely on an analysis of the geological attributes of reserves and takes into consideration the actual physical presence of hydrocarbons in geological formations or the probability of such physical presence. Explored reserves are represented by categories A, B and C<sub>1</sub>; preliminary estimated reserves are represented by category C<sub>2</sub>; prospective resources are represented by category C<sub>3</sub>; forecasted resources are represented by categories D<sub>1</sub> and D<sub>2</sub>.

According to the Russian reserves system, explored natural gas reserves in categories A, B and C<sub>1</sub> are considered to be fully extractable. For oil and gas condensate reserves special index of extraction is used. This index is calculated taking into account geological and technical factors.

Category A reserves are calculated on the part of a deposit drilled in accordance with an approved development project for the oil or natural gas field. The reserves have to be analyzed in detail sufficient for all out characteristics of the part of the deposit as well as peculiar features of its development must be studied.

Category B represents the reserves of a deposit, the oil or gas content of which has been determined on the basis of commercial flows of oil or gas obtained in wells at various hypsometric depths. The main parameters and the major features of the deposit that determine the conditions of its development have been studied in sufficient detail to draw up a project to develop the deposit.

Category C<sub>1</sub> represents the reserves of a deposit, the oil or gas content of which has been determined on the basis of commercial flows of oil or gas obtained in wells and positive results of geologic exploration of non-probed wells. Category C<sub>1</sub> reserves are computed on the basis of results of geophysical exploration work and production drilling and must have been studied in sufficient detail to yield data from which to draw up either a trial industrial development project in the case of a natural gas field or a technological development scheme in the case of an oil field. *Gazprom's* "proved" reserves are valued in accordance with SEC International Standards, whereas "probable" and "possible" reserves are evaluated in accordance with PRMS International Standards.

### PRMS International Standards

When assessing the recoverable reserves PRMS International Standards take into account not only the probability that hydrocarbons are present in a given geological formation but also the economic viability of recovering the reserves. Exploration and drilling costs, ongoing production costs, transportation costs, taxes, prevailing prices for hydrocarbons, and other factors that influence the economic viability of a given deposit are taken into consideration.

Under PRMS International Standards, reserves are classified as proved, probable and possible.

Proved reserves include reserves that are confirmed with a high degree of certainty through an analysis of the development history and/or volume method analysis of the relevant geological and engineering data. Proved reserves are those that have a better than 90% chance of being produced based on the available evidence and taking into account technical and economic factors.

Probable reserves are those reserves, in which hydrocarbons have been located within the geological structure with a lesser degree of certainty because fewer wells have been drilled and/or certain operational tests have not been conducted. Probable reserves are those that have a better than 50% chance of being produced based on the real evidence and taking into account technical and economic factors.

An evaluation of proved and probable natural gas reserves certainly involves multiple uncertainties. The accuracy of any reserves evaluation depends on the quality of available information and engineering and geological interpretations. Based on the results of drilling, testing, and production after the audit date, reserves may be significantly restated upwards or downwards. Changes in the price of natural gas, gas condensate or oil may also affect proved and probable reserves estimates, as well as estimates of future net revenues and present worth, because the reserves are evaluated based on prices and costs as of the audit date.

#### Differences between PRMS International Standards and SEC Standards

- **Certainty of Existence.** Under PRMS International Standards, reserves in undeveloped drilling sites that are located more than one standard inter-well distance from a commercial producing well may be classified as proved reserves if there is "rationalize certainty" that they exist. Under SEC Guidelines, it must be "demonstrated with certainty" that reserves exist before they may be classified as proved reserves.
- **Duration of License.** Under PRMS Standards, proved reserves are projected to the economic production life of the evaluated field. Under SEC Standards, oil and gas deposits may not be classified as proved reserves if they will be recovered after the expiration of the license validity period unless the license holder has the right to renew the license and there is a demonstrated history of license renewal. The Subsoil Resources Law provides that a license holder shall be entitled to request an extension of an existing license where extractable reserves remain upon the expiration of the primary term of the license, provided that the license holder is in material compliance with the license agreement.

*Gazprom* prepares and submits for government approval development plans for its fields based on the economic life of the field, even where this life exceeds the primary term of the associated license. *Gazprom* is in material compliance with license agreements, and will be entitled to extend them to the full economic lives of the associated fields upon the expiration of their primary validity periods. However, the absence of an absolute legal right to extension and a significant demonstrated history of extension makes it uncertain whether extractable reserves *Gazprom* plans to recover after the expiration of a current license validity period may be considered proved reserves under SEC Standards. SEC experts have not provided definitive guidance on whether in these circumstances such extractable reserves could be considered proved under SEC Standards.

## Geological exploration, explorational drilling and production capacity in Russia

### Areas of geological exploration works carried out in Russia

- 1 Krasnodar Territory
- 2 Astrakhan and Orenburg Regions
- 3 Komi Republic and Nenets Autonomous Area
- 4 Kara Sea, Barents Sea and Pechora Sea shelf
- 5 North of Taz Peninsula, Obskaya and Tazovskaya bays, Nadym-Pur-Taz region
- 6 Yamal Peninsula
- 7 Krasnoyarsk Territory, Irkutsk, Tomsk and Kemerovo Regions
- 8 Republic of Sakha (Yakutia)
- 9 Okhotsk Sea shelf

### Key figures of OAO Gazprom and Gazprom Group's subsidiaries geological exploration activities

|  | For the year ended December 31, |          |          |          |          |
|--|---------------------------------|----------|----------|----------|----------|
|  | 2010                            | 2011     | 2012     | 2013     | 2014     |
| Exploration drilling, thousand m           | 204.9                           | 157.7    | 126.4    | 146.4    | 165.4    |
| Completed exploration wells, units         | 82                              | 60       | 54       | 53       | 41       |
| including producing wells                  | 64                              | 45       | 46       | 37       | 31       |
| Seismic exploration 2D, thousand linear km | 18.5                            | 2.8      | 1.9      | 1.4      | 6.6      |
| Seismic exploration 3D, thousand square km | 10.8                            | 8.8      | 8.4      | 13.3     | 12.6     |
| Drilling efficiency, t c.e. / m            | 3,890.7                         | 6,142.0  | 6,099.7  | 5,590.2  | 6,919.0  |
| Drilling efficiency, boe / m               | 20,009.9                        | 31,571.3 | 31,293.5 | 28,575.8 | 35,926.2 |

## Gazprom Group's reserves addition due to geological exploration

For the whole of companies included in RAS consolidated financial (accounting) statements:

## Metric units

|                         | For the year ended December 31, |       |       |       |       |
|-------------------------|---------------------------------|-------|-------|-------|-------|
|                         | 2010                            | 2011  | 2012  | 2013  | 2014  |

Major promising fields of Gazprom Group in Russia

## Major promising fields of Gazprom Group in Russia

| Name  | Description   | Projected capacity   | First production | Design capacity production | Project progress (As of December 31, 2014)   |
|---|---|--|------------------|----------------------------|--|
| <b>Nadym-Pur-Taz Region (Western Siberia)</b> |   |  |                  |                            |  |
| Pestisovoe field (Lower Cretaceous deposits)  | Located in the Nadymsky area of the Yamal-Nenets Autonomous Area, 150 km north-west from Novy Urengoy   | 2.1 bcm of gas   | 2018–2019        | 2021–2022                  | Design activities and further exploration of the field.  |
| Nydzinskiy area of the Medvezhye field        | Located in the Medvezhye field in the Purovsky area of the Yamal-Nenets Autonomous Area, the Tyumen Region.   | 2.7 bcm of gas   | 2011             | 2015–2016                  | Gas is produced from the Aptian-Albian deposits. Research under multi-well pads for Berriasian-Valanginian deposits completed.                           |
| Urengoyenskoye field (Achimovsk deposits)     | The deposits are divided into several blocks for their stage-by-stage development.  |  |                  |                            |  |
|   | Block 1   | 9.6 bcm of gas and 2.95 mm tons of unstable gas condensate | 2008             | 2016–2019                  | Block 1 is under development (ZAO Achimgas — a joint venture with Wintershall Holding GmbH). Block 2 is under development (OOO Gazprom Dobycha Urengoy). |
|   | Block 2   | 8.7 bcm of gas and 2.84 mm tons of unstable gas condensate | 2009             |                            | Design activities of further development of Block 2.   |
|   | Blocks 3–5  | 36.8 bcm of total gas production at the blocks 1–5         | 2017–2019        | 2021–2024                  | Under designing.   |
| Ubleynoye (formations AU and PK)              | Ubleynoe field is located on the border of Nadymsky and Purovsky administrative areas of the Yamal-Nenets Autonomous Area.  | 1.7 bcm of gas   | 2013             | 2014–2015                  | Construction completed. Gas production at the field.   |
| Yen-Yakhinskoye field                         | Effective from 2018, the field is planned to be developed using the gas injection repressuring technology (cycling) that provides the maximum level of gas condensate extraction. | 1.8 mm tons of gas condensate and 5 bcm of gas             | 2003             | 2006                       | Design activities.   |
| <b>Yamal Peninsula and adjacent waters</b>    |   |  |                  |                            |  |
| Bovanenkovskoye field                         | The largest field in the peninsula in terms of reserves, located in the central part and the most studied.  | 115 bcm of gas   | 2012             | 2019–2022                  | Gas production, exploration drilling and further exploration of the field.   |
| Cenomanian-Aptian deposits                    |   | 25 bcm of gas  | 2022–2024        | 2024–2025                  | Further exploration of the field.  |
| Neocomian-Jurassic deposits                   |   |  |                  |                            |  |
| Kharasaveiskoye field                         | Will be brought into development after Bovanenkovo field reaches its design capacity  | 32 bcm of gas  | 2019–2022        | 2022–2025                  | Technological exploration and field development project is under way. The surveys under the multi-well pads completed.                                   |
| Cenomanian-Aptian deposits                    |   | 18 bcm of gas  | 2024–2025        | 2025–2027                  | Further exploration of the deposits.   |
| Neocomian-Jurassic deposits                   |   |  |                  |                            |  |

| Name                               | Description  | Projected capacity  | First production                      | Design capacity production                          | Project progress (As of December 31, 2014)  |
|------------------------------------|--|---|---------------------------------------|---|---|
| Novoportovskoye field              | Located in the south-eastern part of the Yamal peninsula that is characterized by lack of infrastructure.  | 6.1 mm tons of oil  | 2015–2016                             | 2023  | Technological exploration scheme of Novoportovskoye oil and gas condensation field defended, examination of exploratory wells completed, exploration drilling is under way.   |
| Kruzenshternskoye field            | Bovanenkovo group of fields in the Yamal Peninsula.  | 33 bcm of gas   | 2025–2026                             | 2027–2028   | Further exploration of the fields is under way.   |
| <b>Gydan Peninsula</b>             |  |   |                                       |   |   |
| Messoyakha group of fields         | East-Messoyakhsky and West-Messoyakhsky license areas (Messoyakha group of fields) are located in the northern part of the West Siberian oil-and-gas bearing province in the south-west of the Gydan Peninsula. They are amongst the largest fields in terms of discovered reserves.                           | 7.8 mm tons of oil equivalent                               | 2016                                  | 2023  | Technological concept of exploration of license area formed and approved. Seismic exploration works completed, examination of exploration wells completed, exploitative drilling is under way. Positive results of government inspection on infrastructure objects obtained, construction and installation works are under way. |
| West-Messoyakhsky license area     |  | 3.5 mm tons of oil equivalent                               | 2018                                  | 2023  | Preparation to exploration drilling is under way.   |
| <b>The Arctic Shelf</b>            |  |   |                                       |   |   |
| Shtokmanovskoye field              | Located in the central part of the Barents Sea to the north-west from the Yamal Peninsula and 650 km to the north-east from the city of Murmansk. Natural gas is planned to be supplied both through the UGSS and as LNG to remote markets.  | 71 bcm of gas and can be potentially increased up to 95 bcm | 2025 (according to license agreement) | Will be determined relying on the feasibility study | Correction of Feasibility Study of Complex Development of Shtokmanovskoye oil, gas and condensate field is being planned.   |
| Prirazlomnoye field                | Located on the shelf of the Pechora Sea in 55 km from Varandey, in 240 km from river port Naryan-Mar (Pechora river) and in 980 km from sea port Murmansk. The depth of the sea within the area of the deposit does not exceed 17–20 meters. It is the largest of the discovered oil fields of the Arctic sea. | 4.7 mm tons of oil  | 2014                                  | 2022  | The sea ice-resistant fixed platform Prirazlomnaya is put into operation, concept of field development is chosen. Oil production and exploration drilling is under way.   |
| <b>Obskaya and Tazovskaya Bays</b> |  |   |                                       |   |   |
| Severo-Kamennomysskoye field       | Located in the middle part of the Obskaya Bay in the Yamal-Nenets Autonomous Area, the Tyumen Region. The fields are priority objects for development in water areas of the Obskaya and Tazovskaya Bays.   | 14.5 bcm of gas   | 2023–2025                             | 2028–2029   | Adjustment to feasibility study of Severo-Kamennomysskoye field is under way.   |
| Kamennomysskoye-sea                |  | 15.1 bcm of gas   | 2021–2023                             | 2023–2025   | Technical specification for design is approved. Project planning is going on.   |

| Name                                    | Description   | Projected capacity                      | First production  | Design capacity production   | Project progress (As of December 31, 2014)   |
|---|---|---|---|--|--|
| <b>Volga Region</b>                     |   |   |   |  |  |
| Astrakhanskoye field                    | Located in the Volga estuary. It is capable of yielding a production volume of 50–60 bcm of natural gas per year. Currently, its production is constrained at 12 bcm per year mostly due to environmental limitations as well as the need to use expensive technologies. The possibility is being considered of field development using the technology of pumping acid gas into the reservoir, which will allow decreasing hazardous emissions considerably and eliminating problems related to the utilisation of associated sulfur. | –                                       | 1986  | –  | Gas production at the field. With the purpose of technologically development, that allow to increase production at Astrakhanskoye field, OAO Gazprom made preinvestment investigation of Rationale for the creation of experimental polygon in the drilled part of Astrakhanskoye field and Alexeevskoye field for technological workout, that allow for conditions for production development at Astrakhanskoye field. The results of preinvestment investigation provided for the decision to start project investigation works to create the polygon. |
| <b>Volga-Urals Region</b>               |   |   |   |  |  |
| Eastern part of the Orenburgskoye field | Located in 40 km from Orenburg, in the region with developed infrastructure close to selling markets.   | 6.2 mm tons of oil equivalent           | 1994<br>was put into pilot development                              | 2021   | Program of 3D seismic exploratory works completed. Full scale implementation of the system of layer formation pressure support launched. Technological production line No 3 of oil and gas preparation launched.   |
| <b>Eastern Siberia and Far East</b>     |   |   |   |  |  |
| Chayandinskoye field                    | Located in the Lensk district of the Republic of Sakha (Yakutia).   | 25 bcm of gas<br><br>1.9 mm tons of oil | II–IV quarters of 2018<br><br>2015<br>(pilot commercial production) | 2022<br><br>Will be defined based on the results of pilot development planning | Further exploration of the field. Development of project documentation that specified production levels of gas and liquid hydrocarbons is under way. Design and survey work on the field development performed.  |
| Kovyktinskoye field                     | Located in Zhigalovsky and Kazachinskoye-Lensky districts of Irkutsk Region.  | 35 bcm of gas                           | December 2021   | 2025–2026  | Exploration of the field is in progress, as well as preparing to the test of membrane technology to extract helium. Pilot development production.  |
| Kirinskoye field                        | Fields are located on the shelf of Sakhalin.  | 5.5 bcm of gas                          | 2014  | 2019–2020  | Gas production and exploration drilling.   |
| Yuzhno-Kirinskoye field                 | Their development is an integral part of Sakhalin-3 project.  | 16 bcm of gas                           | 2019  | 2025–2027  | Further exploration of the field. Preparation of Technological scheme to develop the field in under way.   |
| Kuyumbinskoye                           | Located in Baikitsky municipal district of the Krasnoyarsk Territory. Included in the Yurubcheno-Okhomska oil and gas area. The area is characterized by the inaccessibility and lack of roads year-round.  | 10.9 mm tons of oil                     | 2018  | 2032   | Oil production since 1998 for own needs and to provide fuel for boilers of nearby localities. Since 2010 the field is at the stage of pilot commercial development. Exploration drilling, infrastructure development.  |

## Geological exploration, production drilling and production capacity abroad

### Key figures of Gazprom's hydrocarbon geological exploration abroad

|                                       | For the year ended December 31, |      |      |      |      |
|---------------------------------------|---------------------------------|------|------|------|------|
|                                       | 2010                            | 2011 | 2012 | 2013 | 2014 |
| Exploration drilling, thousand m      | 21.8                            | 21.8 | 24.0 | 18.1 | 17.6 |
| Completed exploration wells, units    | 10                              | 6    | 7    | 4    | 5    |
| including productive wells, units     | 4                               | 6    | 1    | 1    | 4    |
| 2D seismic survey, thousand linear km | 11.4                            | 1.3  | 0.7  | 0.4  | –    |
| 3D seismic survey, thousand sq. km    | 2.6                             | 0.7  | 0.4  | 1.4  | 1.7  |

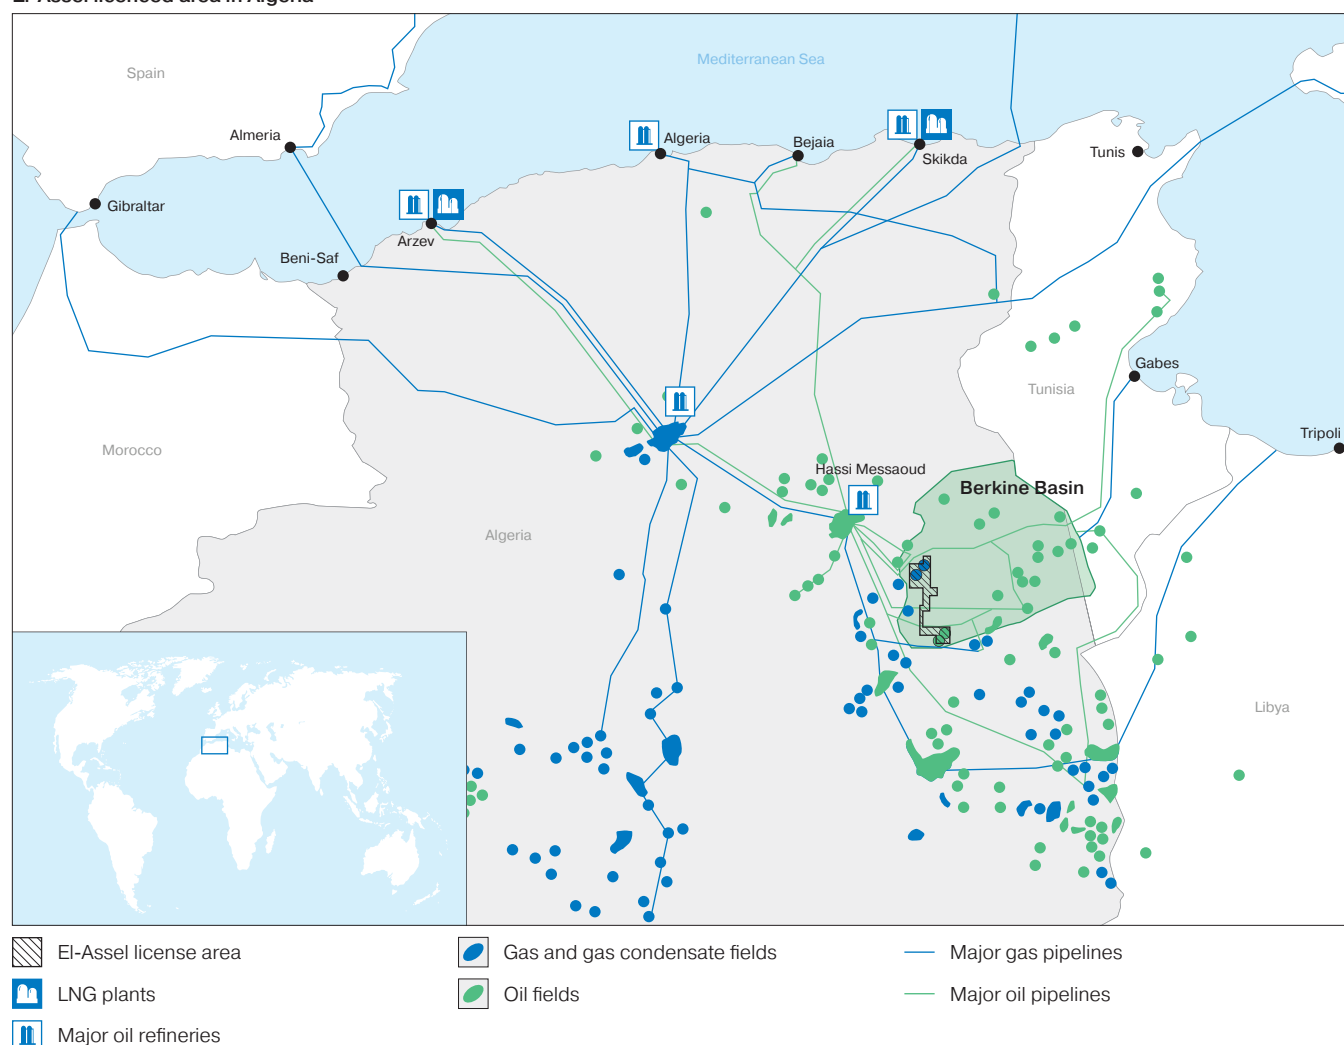

\* The consolidated physical results of *Gazprom Group's* exploration overseas include projects in which the *Group's* subsidiaries acted as operators.

## Major Gazprom Group's exploration and production projects in foreign countries

### Algeria

| Project name, purpose and description   | Project start | The Group's operator role | Terms of the Group participation   | Project progress (as of December 31, 2014)  |
|---|---------------|---------------------------|--|---|
| Hydrocarbon exploration and development of El-Assel area located in the Berkine geological Basin in the east of Algeria in the Sahara Desert. | 2009          | ■                         | Implemented on the basis of the agreement on joint exploration and production of hydrocarbons, Group's share in the project — 49%.<br>Group's project participant — subsidiary Gazprom EP International B.V. (Operator).<br>Partner — the Algerian state oil and gas company Sonatrach.<br>Contractor — the Algerian National Agency for the Valorization of Hydrocarbon Resources (ALNAFT). | Commitments for stage I and stage II of exploration works have been carried out. Stage III of exploration works is in progress as well as reserves evaluation for discovered fields (ZER, ZERN and RSH).<br>Hydrocarbon inflow is the result of drilling of exploratory well RSHN-1 with the depth of 4,120 m within RSHN ordovician deposit. |

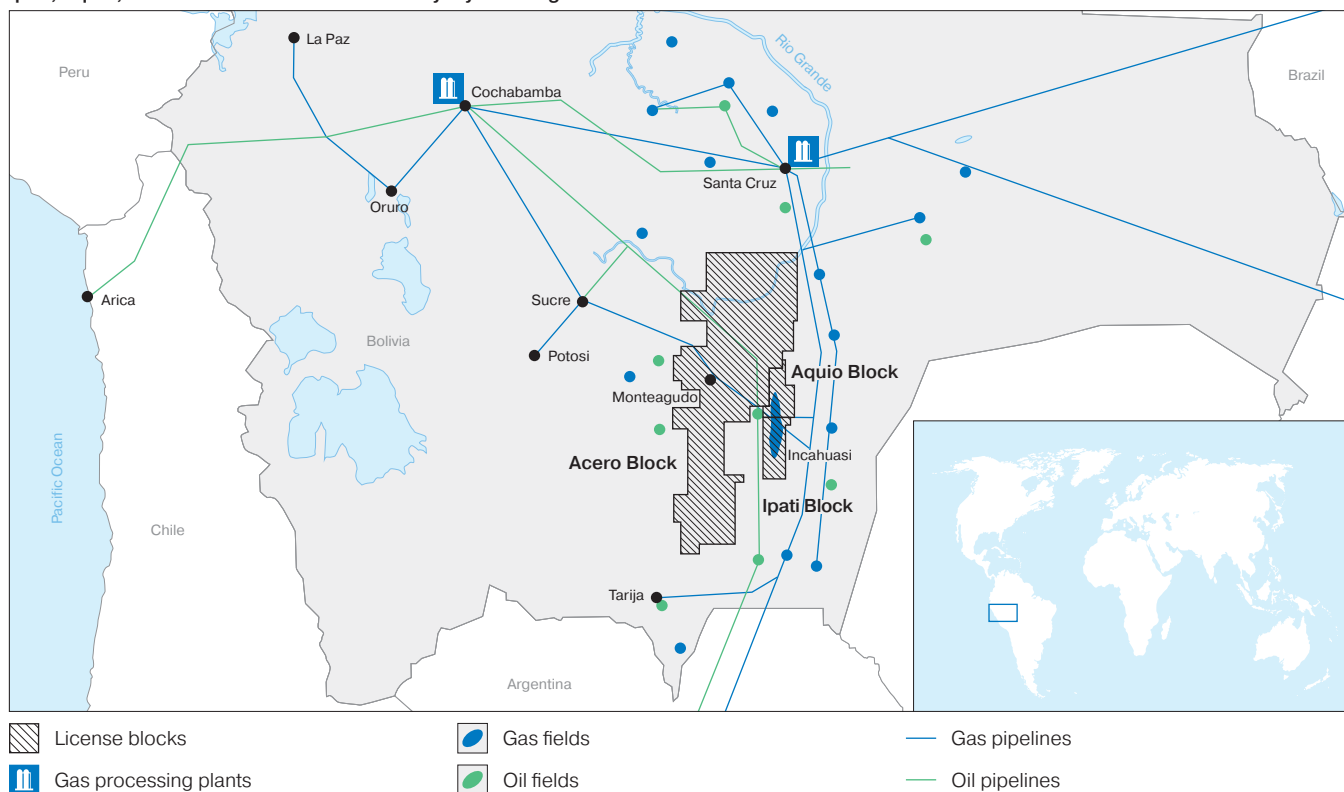

#### El-Assel licenced area in Algeria

## Bolivia

| Project name, purpose and description  | Project start | The Group's operator role | Terms of the Group participation  | Project progress (as of December 31, 2014)  |
|--|---------------|---------------------------|---|---|
| <p>In 2011, the Incahuasi field at Ipati and Aquio bloks was discovered under exploration phase of the project were discovered.</p> <p>Field development characteristics:</p> <ul style="list-style-type: none"> <li>— 2016 — field to be put into operation;</li> <li>— Production capacity — 6.8 bcm of natural gas per year.</li> </ul> | 2010          | —                         | <p>Implemented on the basis of the Agreement on joint activities.</p> <p><i>Gazprom Group</i> is financing 20% of the project costs.</p> <p><i>Group's</i> project participant — GP Exploración y Producción, S.L.</p> <p>Partners — Total EP Bolivie S.A. (operator) — 60%, TecPetro — 20%.</p>  | Geological exploration at Ipati block — a drilling well is under construction. Incahuasi field is under development.  |
| Geological exploration and development of hydrocarbons at Acero block.   | 2013          | —                         | <p>Implemented on the basis of Oil Exploration and Development Service contract.</p> <p><i>Gazprom Group</i> is financing 50% of the project cost at exploration stage, and 22.5% of the project cost at the development stage.</p> <p><i>Group's</i> project participant — GP Exploración y Producción, S.L.</p> <p>Partners: Bolivian state oil and gas company YPFB — 55%, Total EP Bolivie S.A. — 22.5% (operator).</p> | Statutes documents signed for future joint venture between YPFB, Total EP Bolivie S.A. and GP Exploración y Producción, S.L. Preparations to conduct geological and geophysical studies are underway. |

Ipati, Aquio, Acero blocks within Central Andisky oil and gas basin in Bolivia

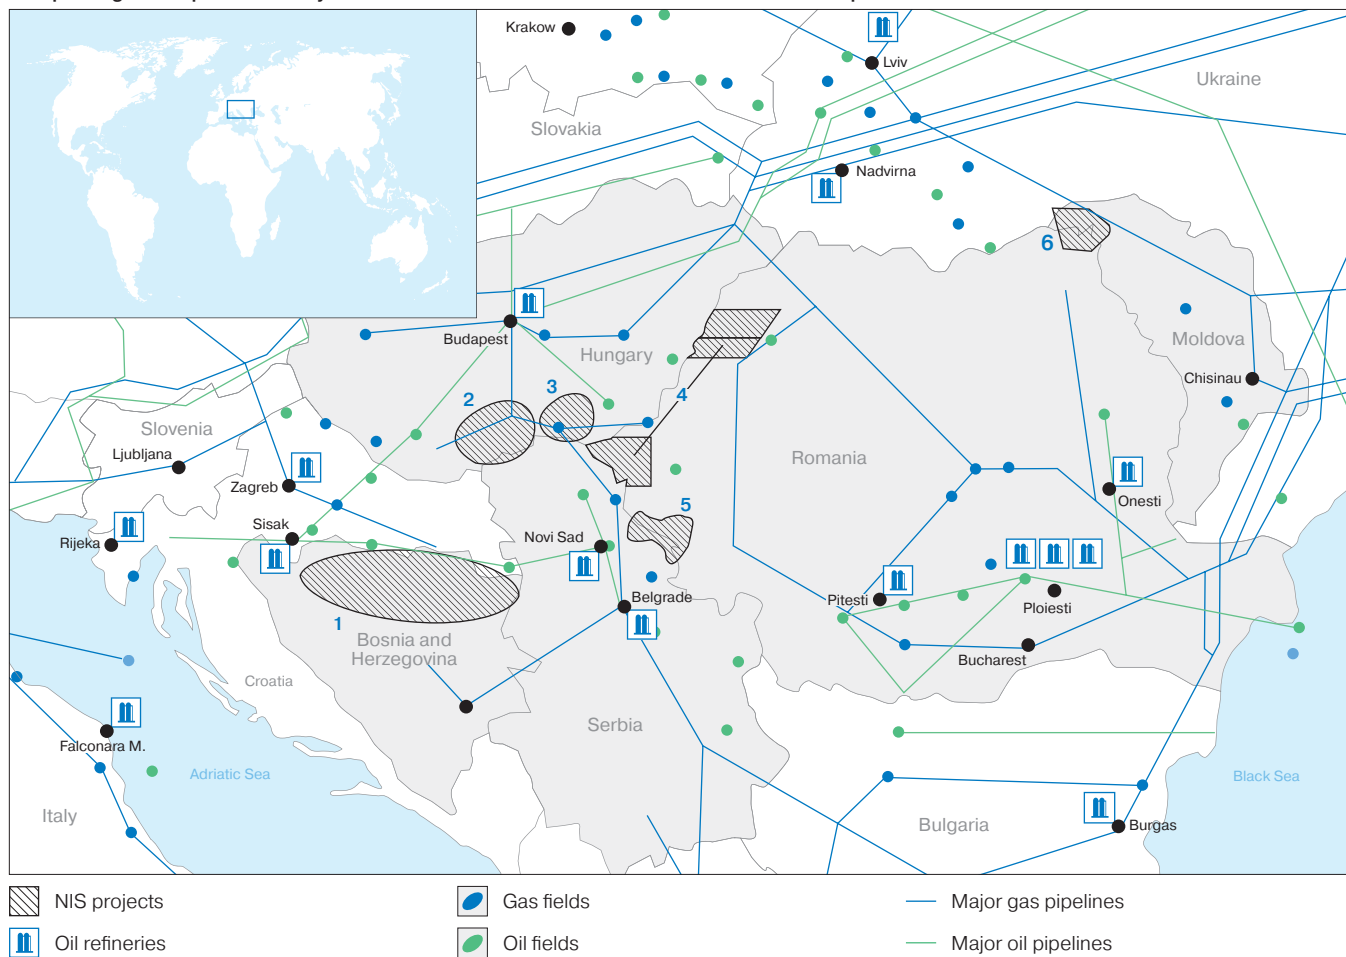

## Central and Eastern Europe

| Project name, purpose and description   | Project start | The Group's operator role | Terms of the Group participation   | Project progress (as of December 31, 2014)  |
|---|---------------|---------------------------|--|---|
| <b>Bosnia and Herzegovina</b>   |               |                           |  |   |
| Exploration blocks in Republika Srpska  | 2011          | ■                         | Implemented on the basis of the Concession Agreement. Participant from the <i>Gazprom Group</i> — NIS (operator). NIS share — 66%. Partner — OAO NeftegazInKor (subsidiary of OAO Zarubezhneft).   | Seismic survey and exploratory drilling completed. Results analysis and consolidation is under way.   |
| <b>Hungary</b>  |               |                           |  |   |
| Block Mako Trough   | 2012          | —                         | Implemented on the basis of Service contract. Participant from the <i>Gazprom Group</i> — NIS. NIS share in the project — 50%. The <i>Group</i> finances the construction of three exploratory wells, later — in proportion to the participation share. Partner — Falcon Oil & Gas (operator).                 | Exploratory drilling of 2 wells is completed with negative results. <i>Gazprom</i> negotiates with Falcon about withdrawal from the project.  |
| Block Kishkunhalash   | 2011          | —                         | Implemented on the basis of the Concession Agreement. Participant from the <i>Gazprom Group</i> — NIS. NIS share in the project — 50%. The <i>Group</i> finances the construction of three exploratory wells, later — in proportion to the participation share. Partner — RAG (operator).                      | Exploratory drilling with positive results is completed. Possibility to transfer the project into the pilot production state is under consideration.  |
| <b>Rumania</b>  |               |                           |  |   |
| Block Ex-2 Tria,<br>Block Ex-3 Baile Felix,<br>Block Ex-7 Periam,<br>Block Ex-8 Biled | 2012–2013     | ■                         | Implemented on the basis of the Concession Agreement. Participant from the <i>Gazprom Group</i> — NIS (operator). NIS share in the project — 85%. The <i>Group</i> finances 100% of geological exploration costs, later — in proportion to the participation share. Partner — East West Petroleum.             | Seismic 2D survey terminated at block Ex-2 due to complicated surface conditions. Seismic surveys at blocks Ex-7, Ex-8 are under way. Seismic surveys at blocks Ex-2, Ex-3 will be conducted after completion of seismic explorations at blocks Ex-7, Ex-8. |
| Block DEE V-20 Jimbolia   | 2012          | ■                         | Implemented on the basis of Agreement on Joint activities. Participant from the <i>Gazprom Group</i> — NIS (operator). NIS share in the project — 51%. The <i>Group</i> finances 100% of geological exploration costs, later — in proportion to the participation share. Partner — Zeta Petroleum & Armax Gas. | Drilling of an appraisal well completed with positive results, the beginning of exploitation is awaited in 2015.  |
| Block Ex-12 Crai Nou  | 2011          | —                         | Implemented on the basis of Agreement on Joint activities. Participant from the <i>Gazprom Group</i> — NIS. NIS share in the project — 50%. The <i>Group</i> finances 100% of geological exploration costs, later — in proportion to the participation share. Partner — Moesia Oil & Gas (operator).           | Geological and geophysical data for previous years collected, systematized and analysed. Geological model of the block was obtained, and proposals for the exploration prepared.  |

## Prospecting and exploration of hydrocarbons in the countries of Central and Eastern Europe

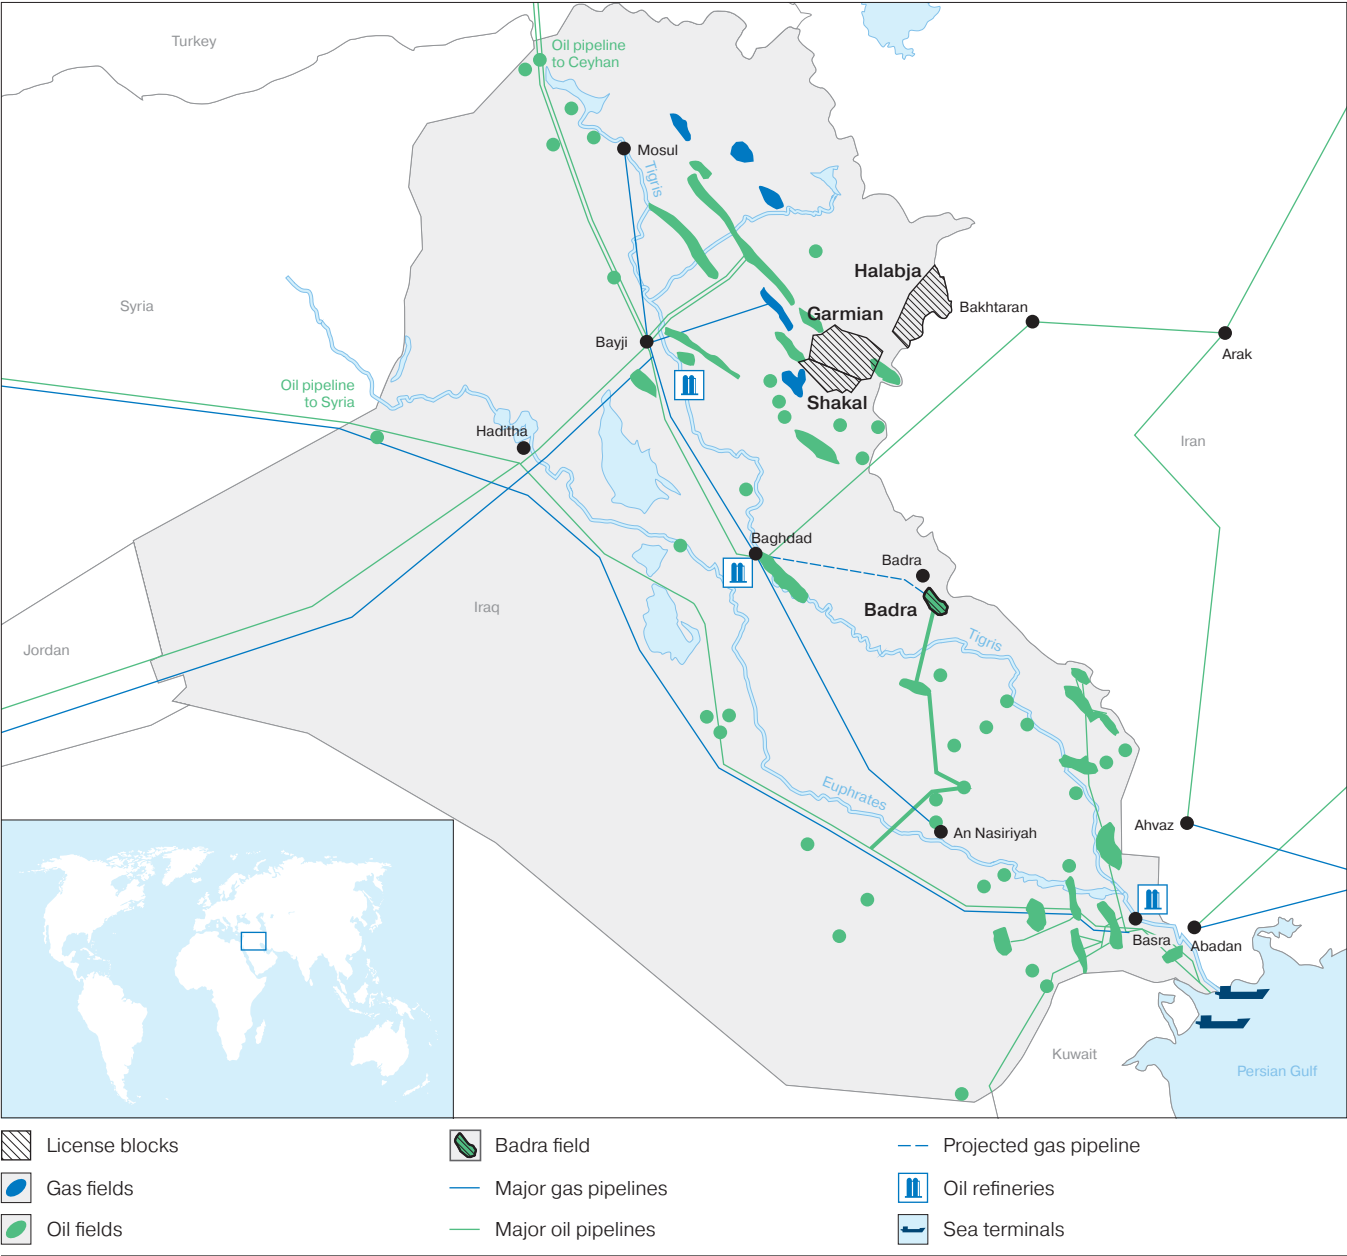

- 1 Exploration blocks in the Republika Srpska  
 2 Block Kishkunhalash  
 3 Block Mako Trough  
 4 Blocks Ex-2, 3, 7, 8  
 5 Block Ex-12  
 6 Block DEE V-20

## Iraq

| <p>Development of Badra field.</p> <p>Project characteristics:</p> <ul style="list-style-type: none"> <li>— Date of commissioning — 2014.</li> <li>— Project capacity — 8.5 mm tons of oil per year.</li> <li>— 2017 — to reach project capacity</li> </ul> <p>The project duration is 20 years with possible prolongation period 5 years.</p> | 2010          | ■                         | <p>Implemented under the Service Contract terms.</p> <p>Participant from the <i>Gazprom Group</i> — Gazprom Neft Badra B.V. (operator). <i>Gazprom neft Group</i> participation share in the project — 30%.</p> <p>Partners — KOGAZ — 22.5%, Petronas — 15%, TPAO — 7.5%.</p> <p>Iraq government (represented by Oil Exploration Company) — 25%.</p> | <p>The field is put into operation. First line of central crude oil gathering is put into operation with the production capacity of 45 thousand barrels per day. Commercial amount of production, necessary to start to recoup costs, achieved. Crude oil pipeline, which connected the field with major pipeline of Iraq is put into operation.</p> <p>Drilling of production wells, construction of line of central crude oil gathering and infrastructure construction is under way.</p> |
| Zagros Project (Kurdistan)   | 2012          |                           |  |   |
| Shakal block   |               | ■                         | <p>Implemented under the PSA terms.</p> <p>Participant from the <i>Gazprom Group</i> — Gazprom Neft Middle East B.V. (operator). <i>Gazprom neft Group</i> participation share — 80%.</p> <p>Partner — WesternZagros.</p>  | <p>Field seismic works completed, 2D and 3D seismic elaboration and express interpretation done, grounds and base camp for the drilling of exploratory wells constructed, layers' testing planned for 2015.</p>   |
| Garmian block  |               | —                         | <p>Implemented under the PSA terms.</p> <p>Participant from the <i>Gazprom Group</i> — Gazprom Neft Middle East B.V. <i>Gazprom neft Group</i> participation share — 40%.</p> <p>Partner — WesternZagros (operator).</p>   | <p>Examination of two appraisal wells completed. As a result of examination of Baram-1 well noncommercial inflow of crude oil is obtained. As a result of examination of Sarqala-1 well debit of well in the amount of 1,500 tons per day is obtained.</p>  |
| Project Halabja (Kurdistan)  | 2013          | ■                         | <p>Implemented under the PSA terms.</p> <p>Participant from the <i>Gazprom Group</i> — Gazprom Neft Middle East B.V. (operator). <i>Gazprom neft Group</i> participation share — 80%.</p> <p>Production share — 80%.</p>   | <p>2D seismic exploration works are in progress.</p>  |

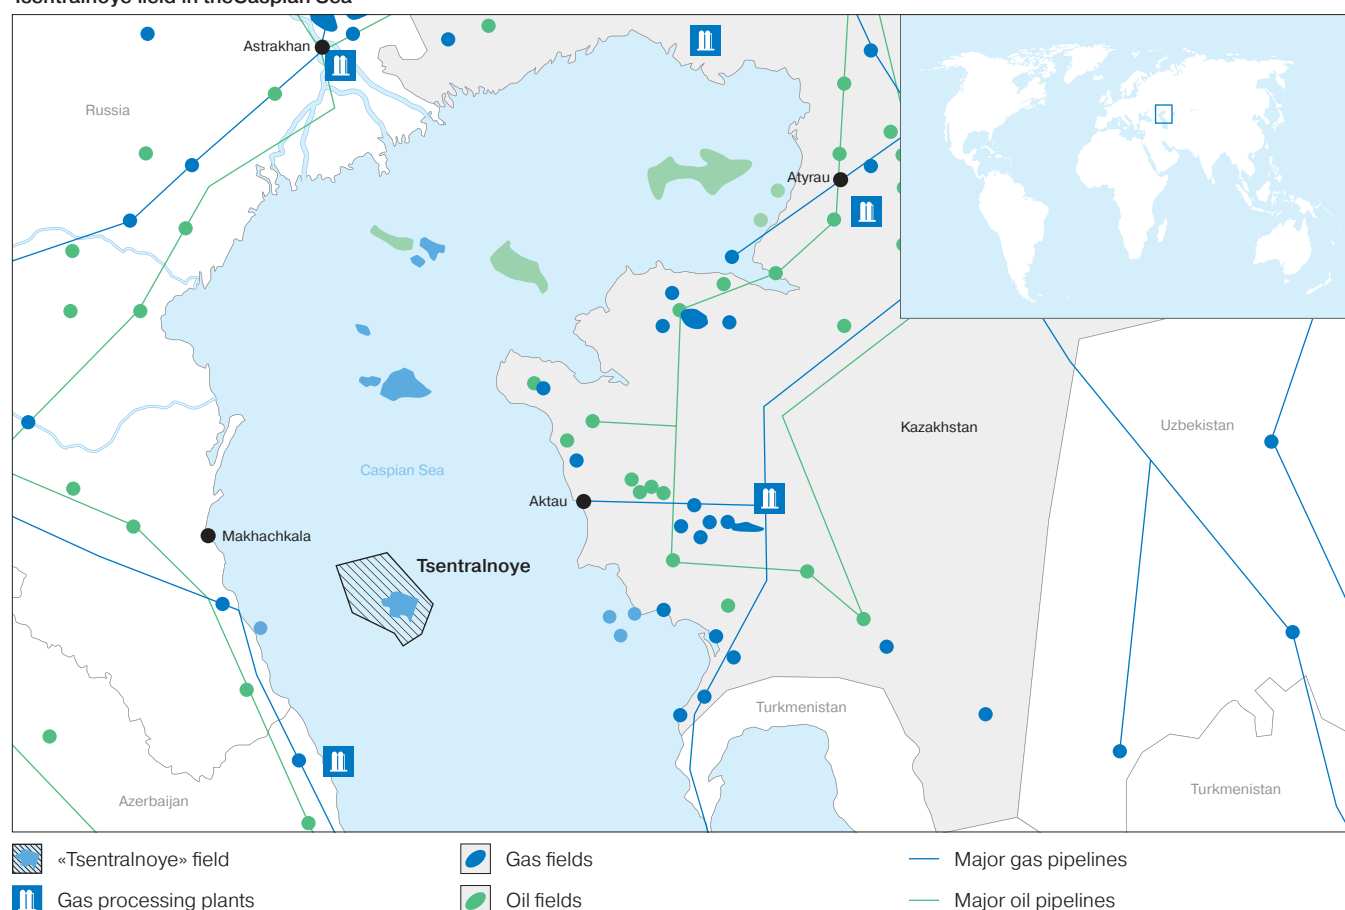

Badra field, Garmian, Shakal and Halabja blocks in Iraq

## Kazakhstan

| Project name, purpose and description   | Project start | The Group's operator role | Terms of the Group participation  | Project progress (as of December 31, 2014)  |
|---|---------------|---------------------------|---|---|
| Development of Tsentralnoye field in the Caspian Sea. The field was discovered in 2008 during implementation of the project of research and exploration of hydrocarbon resources of geological structure Centralnaya. The project was implemented with Group's participation. | 2013          | –                         | Implemented on the basis of Agreement on Bed Boundary Delimitation of Caspian sea in order to exercise sovereign rights for subsoil resource management. The Russian side participant is OOO TsentrKasneftegaz (established on a parity basis by OAO Lukoil and OAO Gazprom), from the Kazakhstan side — AO NK KazMunaiGaz. | In January 2013 Russian-Kazakh joint venture OOO Neftegaz company Centralnaya (AO NK KazMunaiGaz — 50%, OOO TsentrKasneftegaz — 50%) was registered. The joint venture will apply for a license for subsoil use for exploration and production of hydrocarbons in the Centralnaya subsoil area after Protocol to Agreement between Russian Federation and Kazakhstan is signed. The draft Protocol is under consideration at the Kazakh side. |

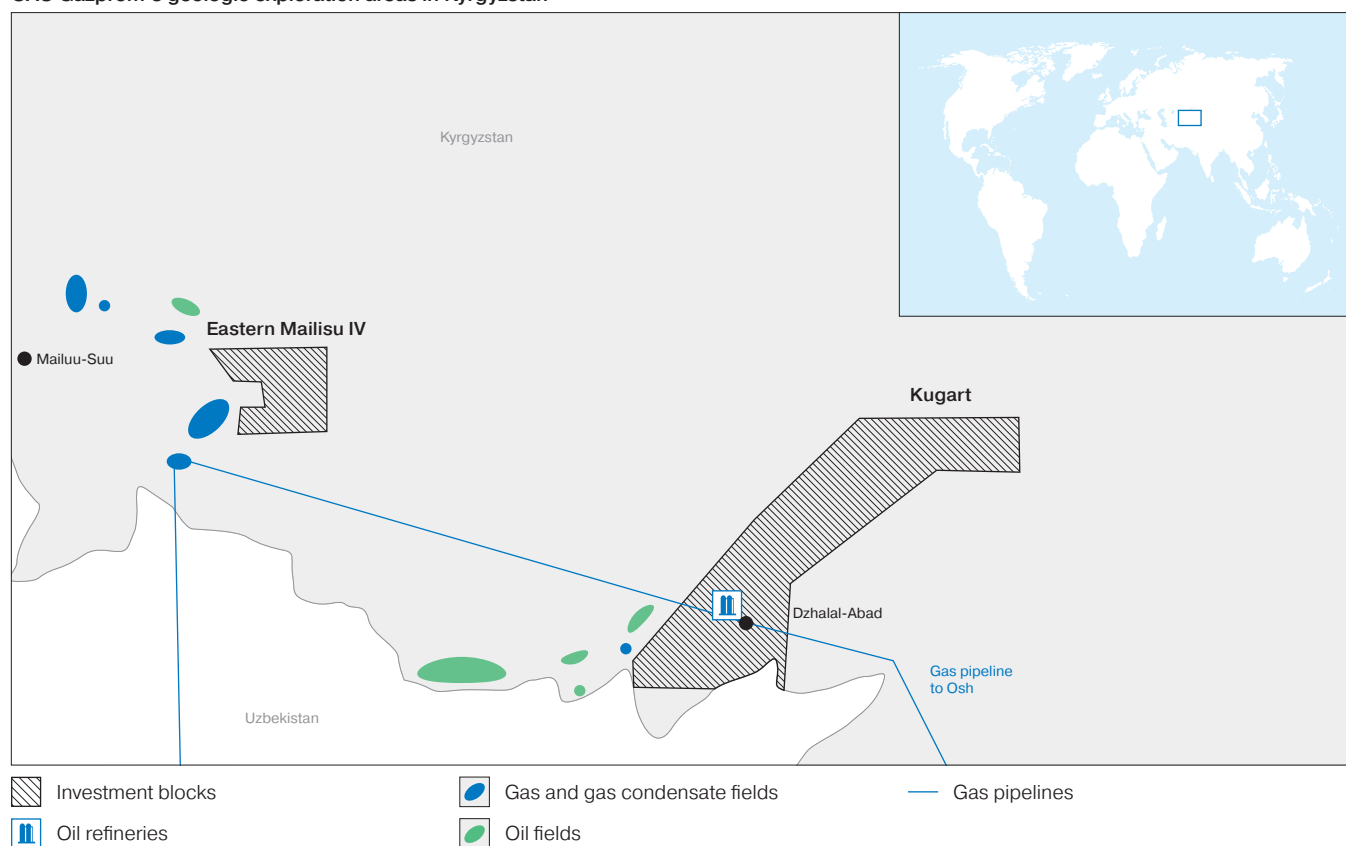

Tsentralnoye field in the Caspian Sea

## Kyrgyzstan

| Project name, purpose and description   | Project start | The Group's operator role | Terms of the Group participation   | Project progress (as of December 31, 2014)   |
|---|---------------|---------------------------|--|--|
| Geologic exploration at East Maylisu – IV and Kugart oil-and-gas promising areas. | 2006          | ■                         | Implemented on the basis of Common agreement on principles for geological study of subsoil and received by OAO Gazprom licenses for subsoil use for exploration of mineral resources. Participant from the <i>Gazprom Group</i> — AO Gazprom Zarubezhneftegaz (operator). At the exploration stage <i>Gazprom Group</i> finances 100% of the costs of the project. | Exploration program updated (works on the project were suspended due to destabilisation of the situation in Kyrgyzstan in 2010). Design and estimates documentation for geophysical works developed, positive decision from FBU Rogeoexpertiza received. Preparation of documentation, necessary for prolongation of the licenses for the rights of usage of reserves, is under way. Preparatory works for the conduction of geophysical researches are under way. |

|---|---------------|---------------------------|---|--|
| Geological exploration and development of hydrocarbons at licensed areas No. 19 (the Mediterranean Sea shelf) and No.64 (on-shore, the northern part of Gadames oil and gas bearing basin). | 2007          | ■                         | Implemented under the PSA terms. Participant from the <i>Gazprom Group</i> — Gazprom Libya B.V. (operator). Partner — Libyan National Oil Corporation. <i>Gazprom Group</i> finances 100% costs at the exploration stage.   | According to PSA, event of force majeure continues.  |
| Hydrocarbon exploration and production under oil concessions C96 and C97. Nine fields are under development   | 2007          | —                         | Share participation in concessions of Wintershall AG (project operator) as a result of the asset swap transaction with BASF. <i>Group's</i> project participant — subsidiary Gazprom EP International B.V. The participant from the <i>Gazprom Group</i> — Gazprom Libya B.V. <i>Gazprom Group's</i> share in the project — 49%. Partners — BASF SE and National Oil Corporation. | In August 2013 the operator of the project announced the event of force majeure. In 2014 oil production was 0.4 mm tons. |

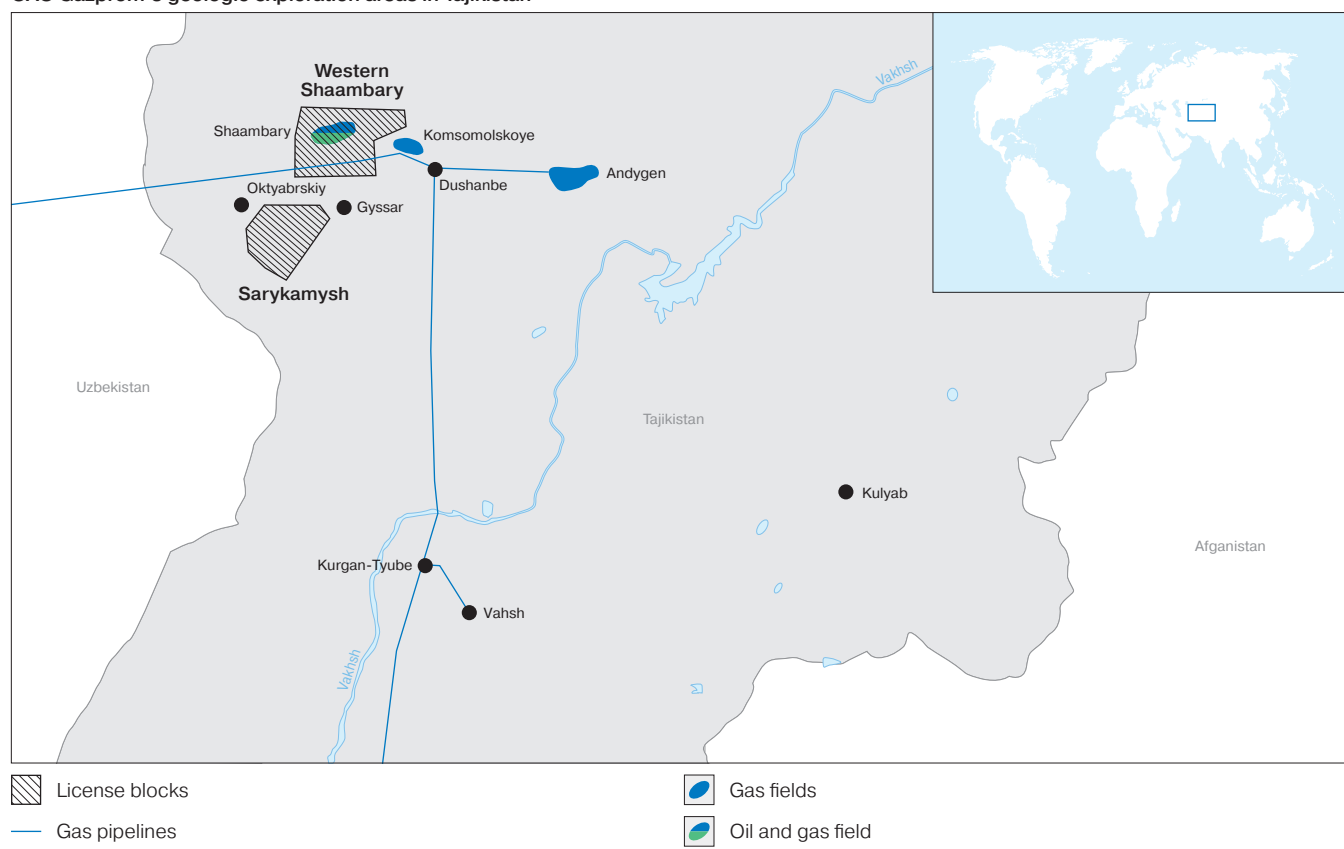

Exploration areas and concession sites in Libya where *Gazprom* participates  
(Licenced areas No. 19 and 64, Concessions C96 and C97)

## Tajikistan

| Project name, purpose and description   | Project start | The Group's operator role | Terms of the Group participation  | Project progress (as of December 31, 2014)   |
|---|---------------|---------------------------|---|--|
| Geologic exploration at Sarikamysh, Sargazon, Rengan, and Zapadny Shohambary oil-and-gas promising areas.<br>Licences for Sargazon and Rengan were returned in 2012 due to the identification of high geological and techno-economic risks of areas' development. | 2006          | ■                         | Implemented on the basis of the Agreement on Common Principles for Geological Study of Subsoil and licenses for subsoil use for exploration of mineral resources received by OAO Gazprom.<br>Participant from the <i>Gazprom Group</i> : AO Gazprom Zarubezhneftegaz (operator).<br><i>Gazprom Group</i> finances 100% of project costs at the exploration stage. | Geophysical work provided by exploration program is fully implemented at Sarikamish area. Test of overdeep (6,450 m) prospecting well 1-p ShakhriNAV is under way.<br>Design and estimate documentation has been developed to perform geophysical surveys on the area of West Shokhambari. Positive decision from FBU Rosgeolexpertiza received. |

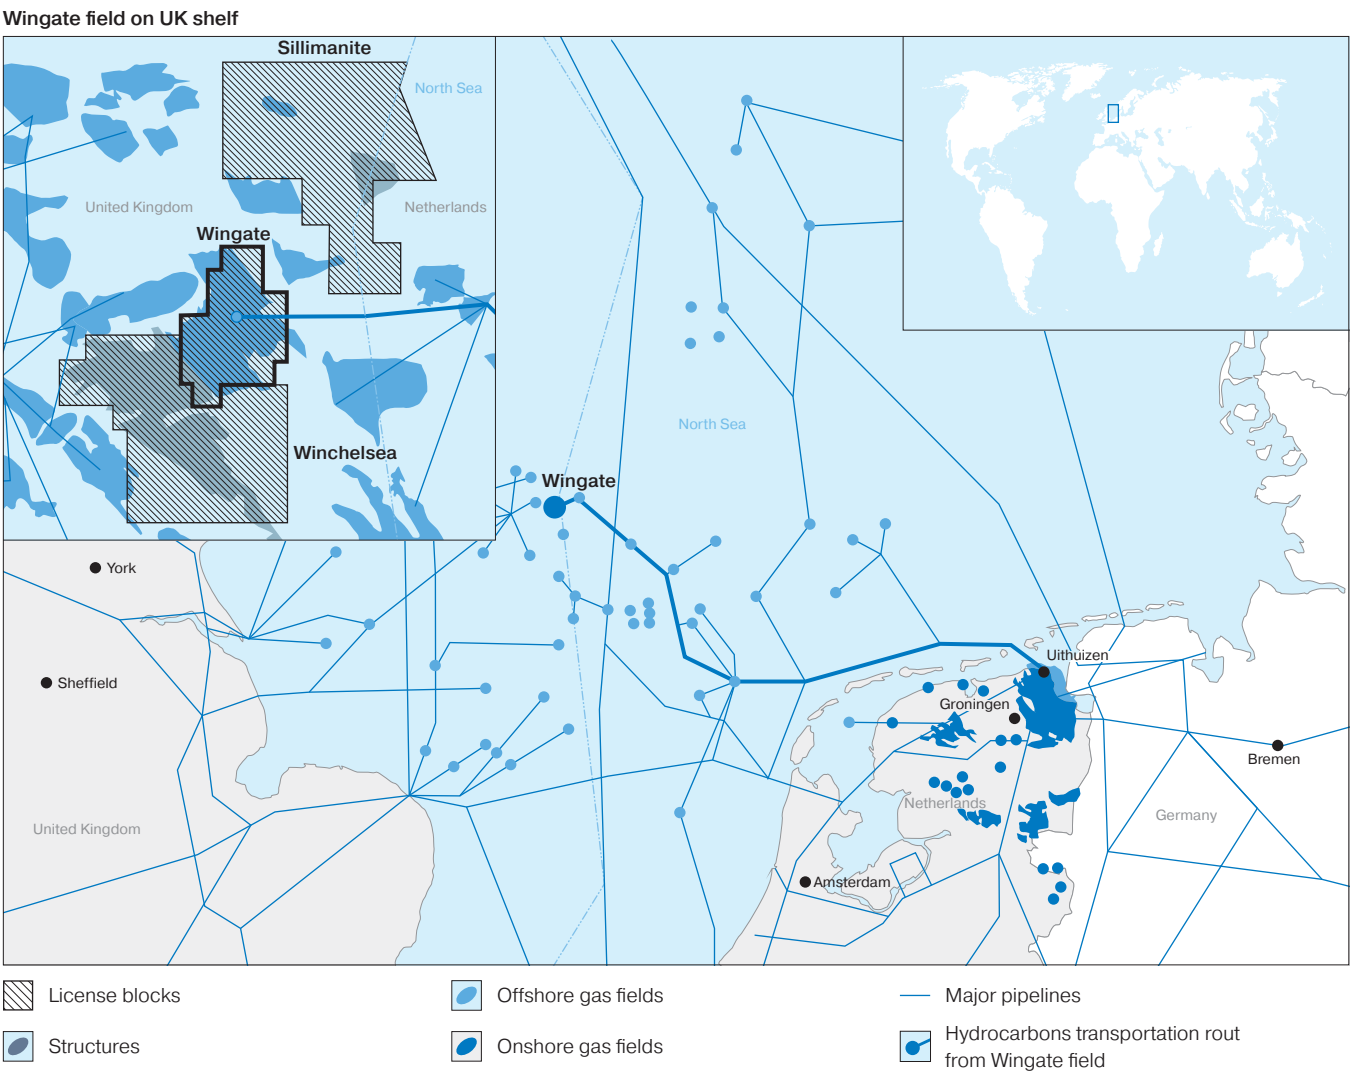

## OAO Gazprom's geologic exploration areas in Tajikistan

## United Kingdom and The Netherlands

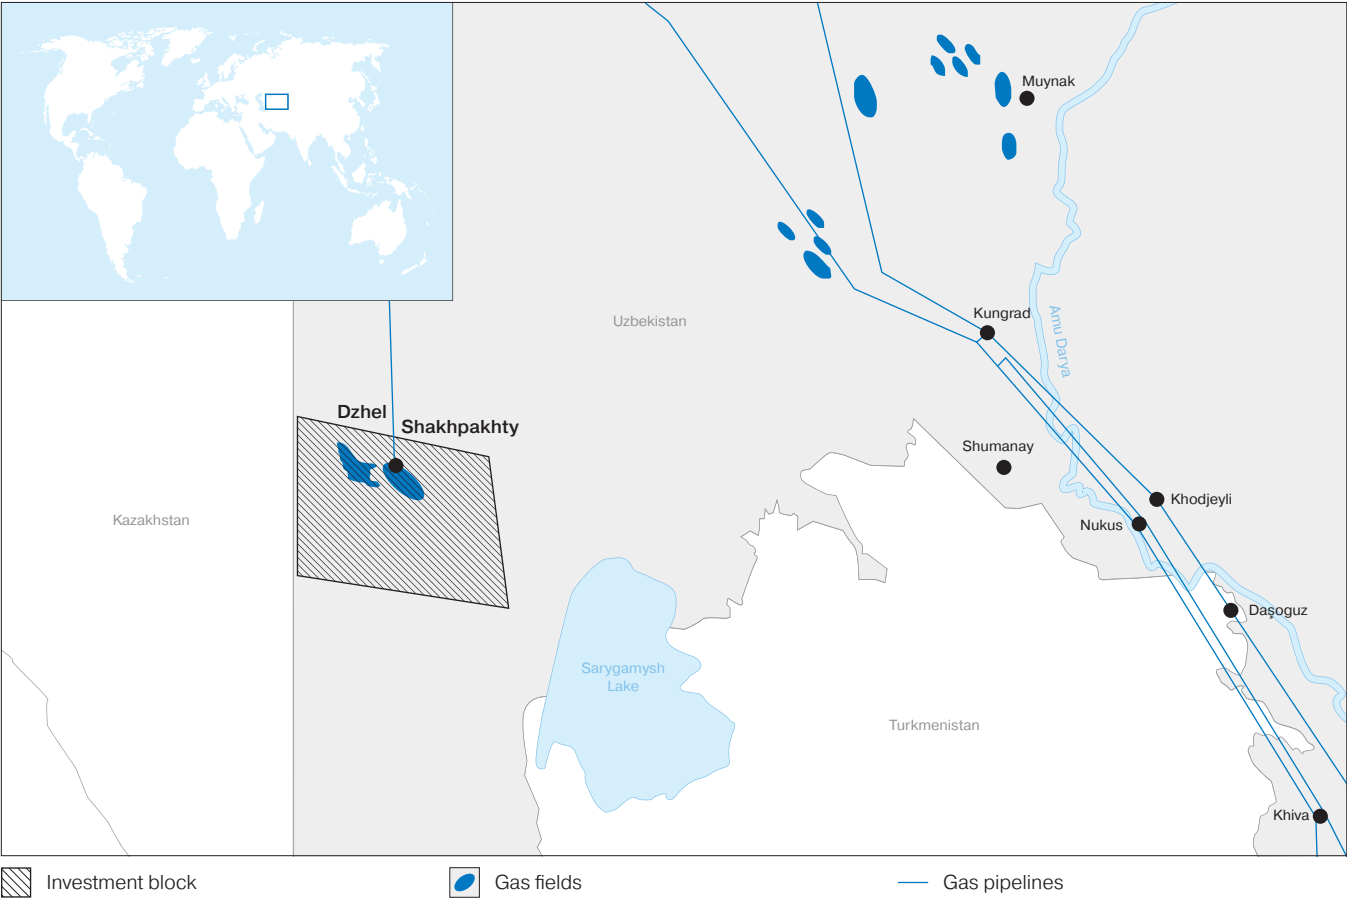

| Project name, purpose and description   | Project start | The Group's operator role | Terms of the Group participation   | Project progress (as of December 31, 2014)   |
|---|---------------|---------------------------|--|--|
| Exploration and production at Wingate gas field and on the shelf of the Netherlands (licensed blocks P1239, P1733). The field was put into operation in 2011.<br>— Production capacity — 0.957 bcm of gas per year.<br>— Period of time to reach estimated capacity — 2015. | 2008          | —                         | The project is implemented on the basis of the agreement on joint activities. <i>Gazprom Group</i> finances 20% of the project cost. <i>Group's</i> project participant — Gazprom International UK Ltd. Partners — Wintershall Noordzee B.V. — 49.5%, XTO UK — 15.5%, Gas Union — 15.0%  | The field is under exploration. Production in 2014 amounted to 0.6 bcm of gas and 4.4 thousand tons of gas condensate. The geological model of the field is updated taking into account debits of the wells.               |
| Exploration at licensed fields: P 1902 (block 44/23c) and P 1903 (blocks 44/23d and 44/24c) of United Kingdom's shelf.  | 2012          | —                         | The project is implemented on the basis of the agreement on joint activities. <i>Gazprom Group</i> finances 20% of the project cost. <i>Group's</i> project participant — Gazprom International UK Ltd. Partners — Wintershall Noordzee B.V. — 49.5%, XTO UK — 15.5%, Gas Union — 15.0%  | Preparation for drilling of the first pilot (exploratory) well is going on at Vinchelsi structure.   |
| Exploration at licensed field D12b of Netherlands's shelf.  | 2011          | —                         | The project is implemented on the basis of the agreement on joint activities. <i>Gazprom Group</i> finances 17.591% of the project cost. <i>Group's</i> project participant — Gazprom International UK Ltd. Partners — Wintershall Noordzee B.V. (operator) — 30.129%, EBN B.V. — 40%, ONE — 7.037%, GdF Suez E&P Nederland B.V. — 5.243%. | Preparation and negotiation of documentation with authorized bodies, necessary for drilling of exploration well at transborder structure Sillimant are complete. Preparation of the program for well drilling is going on. |

## Uzbekistan

| Project name, purpose and description  | Project start | The Group's operator role | Terms of the Group participation   | Project progress (as of December 31, 2014)  |
|--|---------------|---------------------------|--|---|
| Hydrocarbon prospecting, exploration and production at the Ustyurt region of the Republic of Uzbekistan (seven investment blocks). Licenses for six investment blocks has been rented due to lack of prospects for these projects. | 2006          | ■                         | Implemented on the basis of licenses for subsoil use for geological exploration of subsoil.<br>Participant from the <i>Gazprom Group</i> — AO Gazprom Zarubezhneftegaz (operator).<br>Partner — NHK Uzbekneftegaz.<br><i>Gazprom Group</i> finances 100% of project costs at the exploration stage.  | The Dzhelez field within the Shakhpakhty license area was discovered as a result of exploration carried out within the framework of the license obligations.<br>Draft of PSA agreement on main principles of the development of Dzhelez gas condensate field is being prepared.<br>Feasibility proposals for the project realization under PSA conditions are prepared.<br>Feasibility proposals for the project realization under PSA conditions are prepared. |
| Restoration of infrastructure of Shakhpakhty field in Ustyurt region of Uzbekistan and the additional development of residual gas reserves.  | 2004          | —                         | Implemented under the PSA terms.<br>Participant from the <i>Gazprom Group</i> — AO Gazprom Zarubezhneftegaz.<br>Partners — NHK Uzbekneftegaz, Gas Project Development Central Asia AG ( <i>Group</i> share — 50%).<br>Operator — OOO Zarubezhneftegaz — GPD Central Asia (established by Gas Project Development Central Asia AG and AO Gazprom Zarubezhneftegaz on parity basis).<br>Expenses are reimbursed through the supply of natural gas.<br>Remaining after cost recovery gas is distributed between the parties of PSA according to the PSA shares. | The implementation of the PSA: major overhaul of existing wells. Annually, the project produces about 0.3 bcm of natural gas.   |

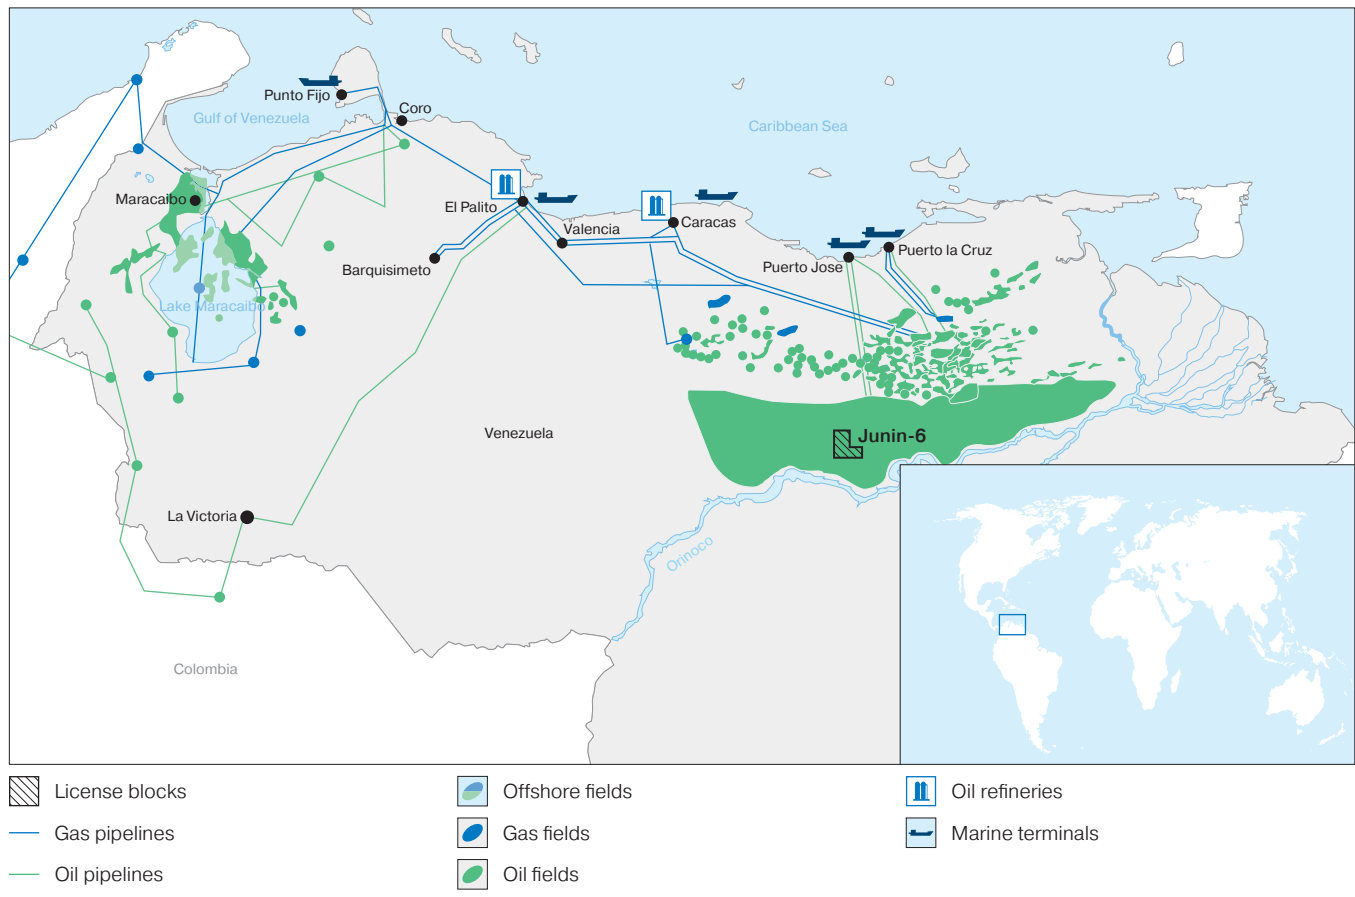

Hydrocarbon exploration, survey and production areas in Uzbekistan (Ustyurt region)

## Venezuela

| Project name, purpose and description                                  | Project start | The Group's operator role | Terms of the Group participation   | Project progress (as of December 31, 2014)   |
|--|---------------|---------------------------|--|--|
| Heavy oil development projects at block № 6 in Orinoco River (Junin-6) | 2009          | –                         | To implement projects in Latin America major Russian oil and gas companies established OOO Natsyonalnyi Neftianoi Konsortsiy with (NNK) 40% stake holding in Petro Miranda JV which is engaged in oil production in the project. OAO Gazprom neft participation in NNK is 20%. | Block is at the stage of pilot commercial development, production amounted to 0.3 mm tons of oil in 2014. Additional exploration of the block is updated and designing of its full-scale development takes place, drilling of production wells is carried out. |

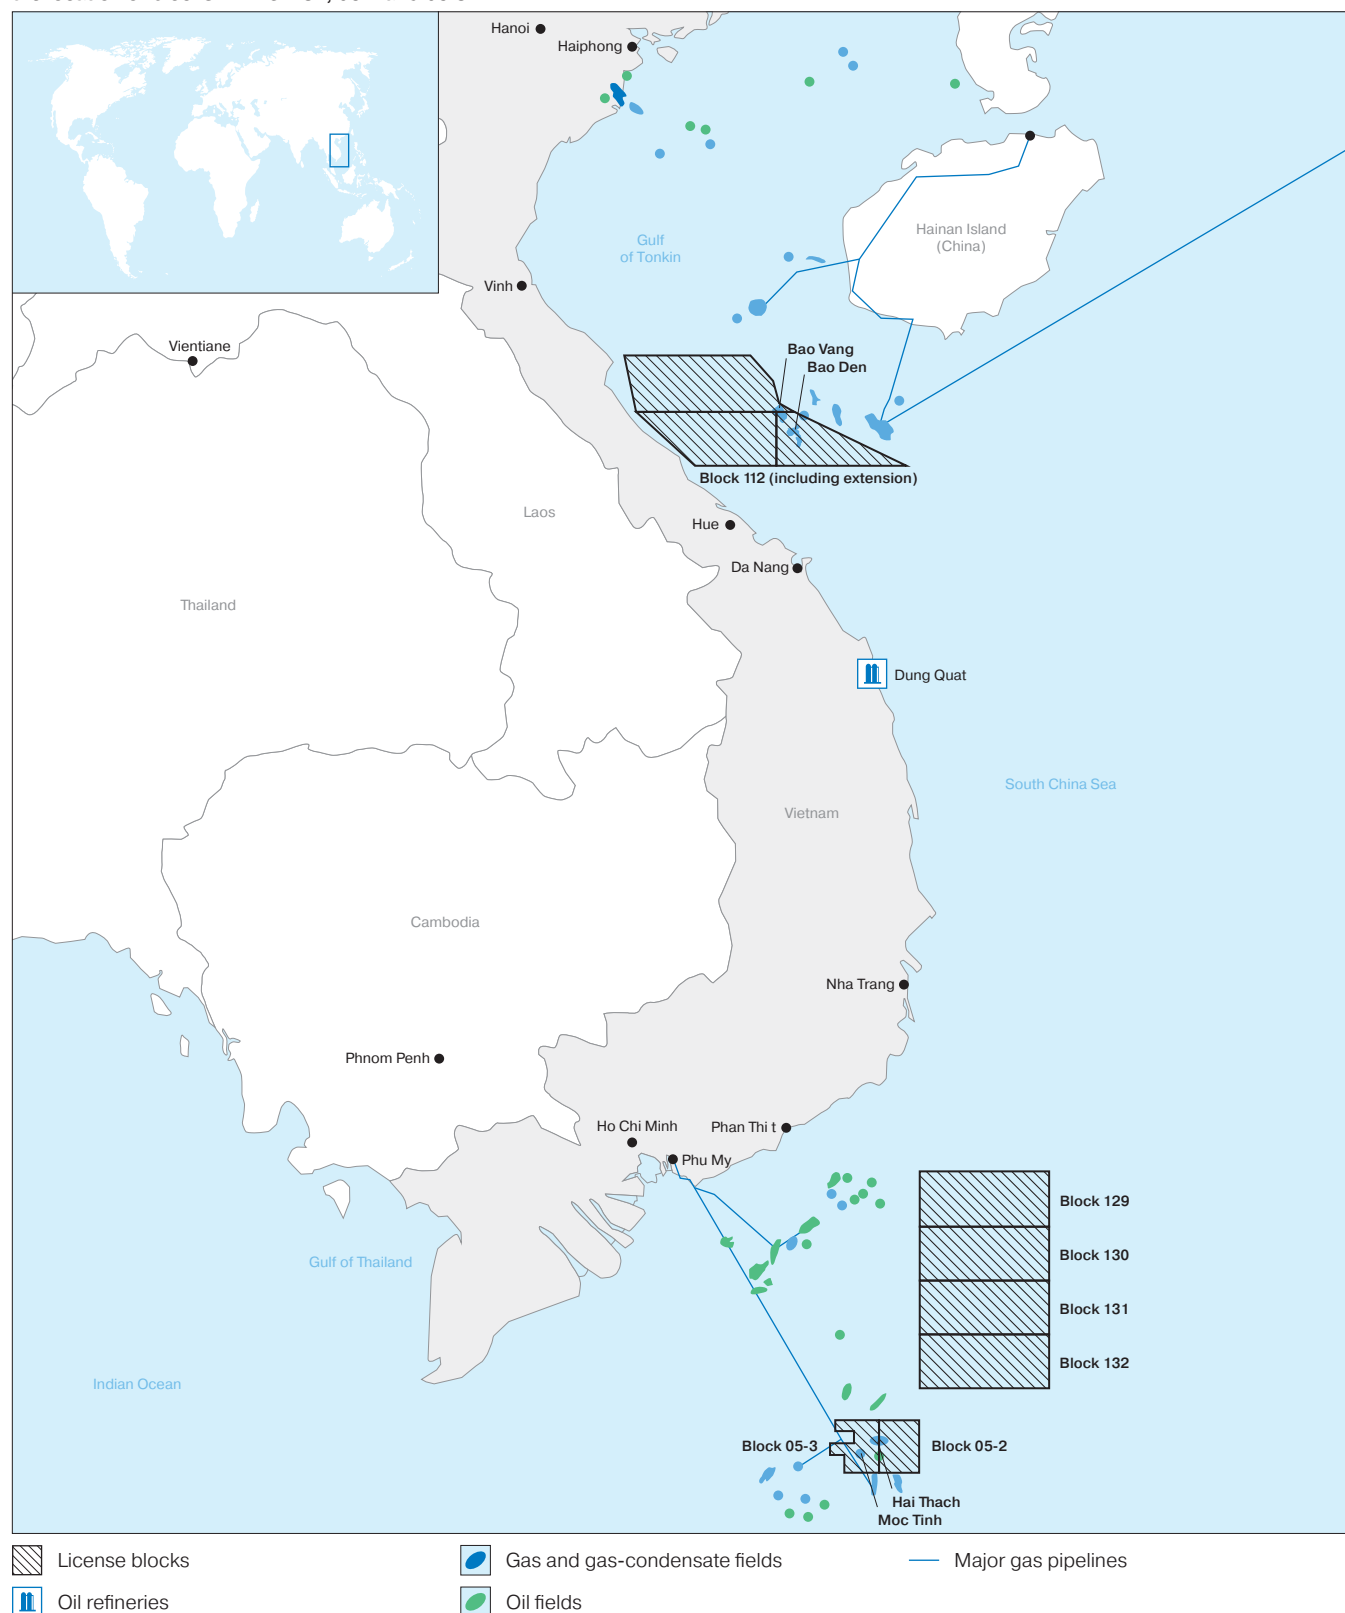

### Urumaco-I and Urumaco-II investment blocks (Gulf of Venezuela), blocks Junin-6

## Vietnam

| Project name, purpose and description   | Project start | The Group's operator role | Terms of the Group participation  | Project progress (as of December 31, 2014)  |
|---|---------------|---------------------------|---|---|
| Hydrocarbon prospecting, exploration, production on the shelf of Vietnam.   |               |                           |   |   |
| Block № 112 (including extension)   | 2000          | ■                         | Implemented under the PSA terms. <i>Gazprom Group</i> finances 100% of costs of the project at the exploration stage. At the stage of development <i>Gazprom Group's</i> will finance 50% of costs. The participant from the <i>Gazprom Group</i> — AO <i>Gazprom Zarubejneftegaz</i> . Partners — Petrovietnam, Petrovietnam Exploration & Production Corporation. Operator — joint operational company Vietgazprom. | Minimal obligations on three stages of exploration works at block No. 112 are executed in full. The gas condensate fields Bao Vang and Bao Den were discovered. The calculation for reserves of the Bao Vang field and its economic value is in progress. Updation of exploratory works program at block 112 of continental shelf of Vietnam, taking into consideration the area increase is completed. |
| Blocks № 129–132  | 2008          | ■                         | Implemented under the PSA. <i>Gazprom Group</i> finances 100% of costs of the project at the exploration stage. At the stage of project development <i>Gazprom Group</i> finances 50% of costs. The participant from the <i>Gazprom Group</i> side — AO <i>Gazprom Zarubejneftegaz</i> . Partner — Petrovietnam, Petrovietnam Exploration & Production Corporation. Operator — joint operational company Vietgazprom. | Identified the locations of the wells at promising sites. The blocks are preparing for exploratory drilling.  |
| Hydrocarbon production from blocks 05-2 and 05-3 on the Vietnam offshore, sale of the produced hydrocarbons. 2 gas condensate fields (Mok Tin and Hai Thak) and one oil field (Kim Cuong Tay) were discovered within blocks 05-2 and 05-3. Tye characteristics of the project for joint joint development of the fields Mok Tin and Hai Thak:<br>— Commence of production in 2013.<br>— The production capacity of the fields 1.98 bcm of natural gas and 614.9 thousand tonnes of gas condensate.<br>— Period of time to reach design capacity — 2015. | 2012          | —                         | Implemented under the PSA terms. <i>Gazprom Group's</i> share — 49%. The participant from the <i>Gazprom Group</i> — <i>Gazprom EP international BV</i> . Partner — Petrovietnam. Operator — operational company Bien Dong.   | Mok Tin (commissioned in October 2013) and Hai Thak fields are under development. In 2014 production at Mok Tin and Hai Thak fields was 1,786.2 mmcm of gas and 366.4 thousand tons of gas condensate. The construction of production wells is in progress.   |

Exploration drilling and seismic survey areas in Vietnam (block № 112 including extension),  
the location of blocks № 129–132, 05.2 and 05.3

### Gas transportation system rehabilitation and development in Russia

|  | For the year ended December 31, |         |         |         |         |

Gas transportation projects and LNG production projects

Gas transportation system

⑤ UGSS expansion to supply gas to the South stream / Turkish stream gas pipeline

- | Icon | Label  | Category                                     |
|------|--|--|
|      | Retrofit of the Urengoy — Novopetrovsk gas pipeline section between Petrovsk and Pisarevka | LNG export routes                            |
|      | LNG plants   | Major gas pipelines                          |
|      | Gazprom's LNG production projects  | Gas fields                                   |
|      | LNG import terminal  | Major underground storage facilities (UGSFs) |
|      | Gazprom Group's projects to build LNG regasification facilities                            |  |

## projects

| Name   | Purpose  | Project parameters   |   |                           | Project progress<br>(As of December 31, 2014)                    |
|--|--|--|---|---------------------------|--|
|  |  | Length   | Number of compressor stations (CS) / total capacity of CS | Annual capacity           | Implementation period  |
| Pipeline link to the Baltic LNG plant  | Gas supply to LNG plant.   | 360 km   | 1 CS / 112 MW   | 34.4 bcm                  | 2020   |
| Construction of loops of the Gryzovets — Vyborg gas pipeline, to loop second line on Gryzovets — Volkhov section | Gas supply to consumers of the North-West of Russia.   | 213 km   | –   | 9.4 bcm                   | 2014–2020  |
| Turkish stream pipeline  | Russian natural gas supply via Black sea to Turkey and further to the border with Greece.  | Approximately 1,100 km (will be confirmed subject to results of feasibility study) | To be defined   | 63 bcm                    | 2016–2019 (will be confirmed based on feasibility study results) |
| Expansion of UGSS for providing the South stream / Turkish stream gas pipeline with gas                          | Gas transportation through the territory of Russia for providing the Turkish stream gas pipeline with gas. Prior to 2014 — for providing the South stream gas pipeline with gas. | 2,506 km   | 10 CS / 1,516 MW  | Up to 65 bcm <sup>3</sup> | 2014–2017  |
| Rehabilitation of the Petrovsk — Pisarevka section of the Urengoy — Novopskov pipeline                           | Rehabilitation of existing facilities to increase GTS reliability to supply gas to the Turkish stream pipeline.  | 20 km (underwater lines and loopings)  | 7 CS / 544 MW   | 31.6 bcm                  | 2014–2017  |

| Name                                       | Purpose   | Project parameters   |   |  | Project progress<br>(As of December 31, 2014)   |
|--|---|--|---|--|---|
|  |   | Length   | Number of compressor stations (CS) / total capacity of CS     | Annual capacity  | Implementation period   |
| Murmansk — Volkhov                         | Transporting gas from the Shtokmanovskoye field to Russian UGSS.  | 1,365 km   | Up to 10 CS / 1,225 MW  | Up to 46 bcm (depends on production rate at Shtokmanovskoye field) | Period of construction and date of commissioning of the pipeline will be determined after the final investment decision regarding Shtokmanovskoye field is made.  |
| Bovanenkovo — Ukhta (second line)          | Gas pipeline system for gas transportation from the Yamal Peninsula fields to central regions of Russia.  | 1,266.9 km   | 9 CS / 830 MW   | 57.5 bcm   | Construction work in progress.  |
| Ukhta — Torzhok (second line)              |   | 972 km   | 7 CS / 625 MW   | 45 bcm   | The project design has been developed. The detailed design is developing.   |
| "Western" route of gas deliveries to China | Export diversification, gas delivery from Western Siberia to China.   | 2,622 km   | 12 CS (may be adjusted)                                       | Design capacity — 30 bcm per year                                  | In November 2014 Gazprom and CNPC signed a Framework Agreement for Russian natural gas supplies to China via the «western» route. <i>Gazprom</i> currently negotiates with China partners on the project.   |
| Sakhalin — Khabarovsk — Vladivostok        | Transporting gas from Sakhalin island to households and industrial consumers of Khabarovsk and Primorye territories, including the LNG plant near Vladivostok.  | The project is subject to adjustment based on the adjusted balance of gas. |   |  | In 2012, a first starting complex comprising the linear part of 1,354 km and the CS with 32 MW capacity performing 5.5 bcm was commissioned. Design and survey on project documentation adjustment is under development. The works are related to further development of Sakhalin — Khabarovsk — Vladivostok gas transportation system, change in terrain conditions after the flood of 2013, as well as change in project technical norms. |
| Power of Siberia                           | Transporting gas from Kovyktinskoye gas and condensate field and Chayandinskoye oil, gas and condensate field to supply gas to the Far Eastern Federal District and gas supplies to Asia-Pacific markets. | 3,056 km, including 2,177 km to Blagoveshchensk                            | 9 CS / 1,330 MW, including 8 CS / 1,298 MW to Blagoveshchensk | Up to 61 bcm   | Design and survey works on Chayanda — Lensk pipeline section are performed. The results are transferred to internal expertise business unit of OAO Gazprom. Project documentation is under development. Design and survey works on Lensk — Skovorodino — Belogorsk and Belogorsk-Blagoveshchensk sections are under development.  |

## Gazprom Group's projects to build LNG regasification facilities

| Name                                | Target market                                     | Project capacity | Implementation period | Project progress (As of December 31, 2014)   |
|-------------------------------------|---|------------------|-----------------------|--|
| Kaliningrad regasification terminal | Provision for Kaliningrad Region energy security. | 2.7 bcm per year | December 2017         | Preinvestment study for the regasification terminal in Kaliningrad area is complete. As a result the decision is made to shift to project stage. |

## Gazprom Group's LNG projects

| Name   | Target market   | Project capacity   | Implementation period  | Project progress (As of December 31, 2014)   |
|--|---|--|--|--|
| Baltic LNG   | Countries of the Atlantic region, including European countries that are not covered by the supply of Russian pipeline gas (Spain, Portugal), Latin America, Middle East, India. Apart from that part of LNG of the project may be delivered to European bunker fuel market. | 10 mm tons per year  | 2020<br>(Commissioning of the first line)                    | Countries of the Atlantic region, including European countries that are not covered by the supply of Russian pipeline gas (Spain, Portugal), Latin America, Middle East, India. Apart from that part of LNG of the project may be delivered to European bunker fuel market |
| Vladivostok-LNG  | Asia-Pacific countries  | 10 mm tons with potential to increase to 15 mm tons per year | Will be determined based on the results of design and survey | Special purpose company OOO Gazprom LNG Vladivostok was established. Design and survey works are under development.  |
| Third technological line of Sakhalin-2 LNG plant project | Asia-Pacific countries  | 5 mm tons  | Will be determined based on the results of design and survey | The integral technical concept of the project, part of FEED, is finalized.   |

Gazprom’s current and prospective UGSFs in Russia

### Areas of utilization of some types of refined oil and gas products produced by Gazprom Group

| Product type  | Area of utilization  |
|---|--|
| Helium  | Energy, medicine, astronautics, aviation, shipbuilding, chemicals, metallurgical and welding engineering, laser technology, chromatography, basic research |
| Mineral fertilizers (carbamide, liquid ammonia, carbon dioxide, ammonium nitrate) | Agriculture  |
| Monomers (ethylene, propylene, styrene)   | Raw materials for the petrochemical industry   |
| Products of organic synthesis (butyl, plasticizer DOP)                            | Raw materials for the petrochemical industry.  |
| Polymer-bitumen binder  | Road construction  |
| Polymers (polyethylene, polystyrene)  | Film, packaging, household products, furniture, medical devices  |
| Ethane  | Raw materials for the petrochemical  |
| Wide fraction of light hydrocarbons   | Raw materials for the petrochemical industry   |

### Refined products produced by major Gazprom Group's subsidiaries (excluding give-and-take raw materials)

|  | For the year ended December 31, |          |          |          |          |

\* For major 100% subsidiaries, see Glossary.

\*\* The results are shown since June 1, 2012.

Location of hydrocarbon processing and refining plants

\* The volume of oil refining at Mozyr Oil Refinery is determined by Gazprom Group's oil supply schedule, approved by the Russian Ministry of Energy, and the scheme to share oil supplies between Gazprom neft Group's own refineries and sales to Mozyr Oil Refinery as set out in the Intergovernmental Agreement between Russia and Belarus.

## Gas processing, oil refining and petrochemicals plants

## Gazprom Group's major projects in electric power generation

| Name  | Purpose  | Project capacity                  |                             |                             |
|---|--|-----------------------------------|-----------------------------|-----------------------------|
|   |  |                                   | Specified electric capacity | Specified heating capacity  |
| OAO Mosenergo   |  |                                   |                             |                             |
| Power unit construction at CHP-20                             | Increase in installed capacity of power plant, the replacement of worn-out and obsolete equipment.   | 1 combined cycle gas turbine unit | 420 MW                      | 223 Gcalh                   |
| OAO OGC-2   |  |                                   |                             |                             |
| Power unit construction at Novocherkasskaya GRES              | Innovative project for power unit construction with a capacity of 330 MW based on circulating fluidized boiling layer. Allows for the use of different kinds of fuels in steam boilers, enables reduction in polluted emissions. | 1 combined-cycle unit             | 330 MW                      | Not provided by the project |
| Coal power unit construction at Troitskaya GRES               | Eliminate energy shortage in the Chelyabinsk Region. Reduce emissions from existing units, reduce fuel consumption, replace outdated equipment.  | 1 combined-cycle unit             | 660 MW                      | 200 Gcalh                   |
| Coal power unit upgrade at Ryazanskaya GRES                   | Exhausted park resources and individual basic units, low efficiency and reliability. The project will introduce an additional 60 MW of capacity.   | 1 combined-cycle unit             | 330 MW                      | Not provided by the project |
| Power unit No. 10 Construction at Serovskaya GRES.            | Replace worn-out parts of existing equipment, provide base load in the region.   | 1 combined cycle gas turbine unit | 420 MW                      | 135.1 Gcalh                 |
| OAO TGC-1   |  |                                   |                             |                             |
| Construction of the new gas-turbine units at Tsentralnoy CHP. | Increase efficiency and reliability of the station, improve thermal efficiency.  | 2 turbo-power units               | 2*50 MW                     | 120 Gcalh                   |
| OAO Gazprom neftehim Salavat                                  |  |                                   |                             |                             |
| Power unit construction at Novosalavatskaya CHP               | Increase electric power production, increase reliability and efficiency of heat and electric power generation, provide for withdrawal of equipment that has exploited its performance potential.                                 | 1 combined cycle gas turbine unit | 410 MW                      | 207 Gcalh                   |

## Sales of natural gas (net of VAT, excise tax, and customs duties):
