### Preface

Fact book "Gazprom in Figures 2005–2009" is an informational and statistical edition, prepared for OAO Gazprom annual General shareholders meeting 2010. The Fact book is prepared on the basis of corporate reports of OAO Gazprom, as well as on the basis of Russian and foreign sources of publicly disclosed information.

In the present Fact book, the term OAO Gazprom refers to the head company of the *Group*, i.e. to Open Joint Stock Company Gazprom. The *Gazprom Group*, the *Group* or *Gazprom* imply OAO Gazprom and its subsidiaries taken as a whole. Similarly, the terms *Gazprom Neft Group* and *Gazprom Neft* refer to OAO Gazprom Neft and its subsidiaries, the term *Sibur Holding* refers to OAO Sibur Holding and its subsidiaries.

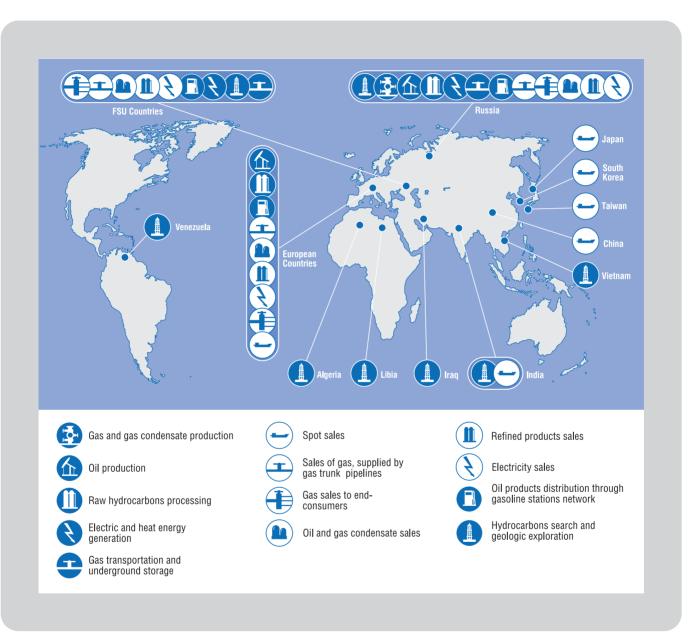

Gazprom's operating results presented in the Fact book are stated based on the principles for preparing Gazprom Group's consolidated accounting (financial) statements. At the same time some results of OAO Gazprom and its subsidiaries' operations are stated in compliance with the principles for preparing management reports. Figures calculated using these methods may differ due to differences in methodologies for preparing consolidated financial statements and management reports.

Stated data in tons of coal equivalent and barrels of oil equivalent are calculated on basis of stated coefficients. *Group* performs management accounting in metric units of measurement.

Gazprom's financial results are stated based on the principles for preparing Gazprom Group's consolidated accounting (financial) statements in accordance with the Russian legislation. The currency of Gazprom Group's consolidated accounting (financial) statements is the Russian Rouble. The data stated in US Dollars and Euro is calculated based on stated exchange rate and is not a data of Group's financial statements.

### GAZPROM IN THE RUSSIAN AND GLOBAL ENERGY INDUSTRY

### **GAZPROM GROUP ACTIVITY IN RUSSIA AND ABROAD IN 2009**

### GAZPROM IN THE WORLD GAS INDUSTRY AND IN THE RUSSIAN FUEL AND ENERGY COMPLEX

		As of and for	the year ended	December 31,	
	2005	2006	2007	2008	2009
Share in the world natural gas industry

### **RESERVES**

### MAIN DIFFERENCES BETWEEN RUSSIAN RESERVES SYSTEM AND INTERNATIONAL STANDARDS

*Gazprom's* hydrocarbon reserves are estimated using both the Russian reserves system and international methodologies developed as part of the Petroleum Resources Management System (PRMS Standards) and by the US Securities and Exchange Commission (SEC Standards).

PRMS was approved by the Society of Petroleum Engineers (SPE), the World Petroleum Council, the American Association of Petroleum Geologists, and the Society of Petroleum Evaluation Engineers in March 2007. PRMS, a new international reserve evaluation standard replaced SPE definitions published in 1997. Independent petroleum engineering companies have been auditing *Gazprom's* reserves in accordance with the international standards since 1997.

The Russian reserves system differs significantly from the international standards in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves.

### **RUSSIAN RESERVES SYSTEM**

The Russian reserves system is based solely on an analysis of the geological attributes of reserves and takes into consideration the actual physical presence of hydrocarbons in geological formations or the probability of such physical presence. Explored reserves are represented by categories A, B, and  $C_1$ ; preliminary estimated reserves are represented by category  $C_2$ ; prospective resources are represented by category  $C_3$ ; and forecasted resources are represented by categories  $D_1$  and  $D_2$ .

According to the Russian reserves system, explored natural gas reserves in categories A, B and  $C_1$  are considered to be fully extractable. For oil and gas condensate reserves special index of extraction is used. This index is calculated taking into account geological and technical factors.

Category A reserves are calculated on the part of a deposit drilled in accordance with an approved development project for the oil or natural gas field. They represent reserves that have been analyzed in sufficient detail.

Category B represents the reserves of a deposit, the oil or gas content of which has been determined on the basis of commercial flows of oil or gas obtained in wells at various hypsometric depths. The main parameters and the major features of the deposit that determine the conditions of its development have been studied in sufficient detail to draw up a project to develop the deposit.

Category C<sub>1</sub> represents the reserves of a deposit, the oil or gas content of which has been determined on the basis of commercial flows of oil or gas obtained in wells and positive results of geologic exploration of non-probed wells. Category C<sub>1</sub> reserves are computed on the basis of results of geophysical exploration work and production drilling and must have been studied in sufficient detail to yield data from which to draw up either a trial industrial development project in the case of a natural gas field or a technological development scheme in the case of an oil field. *Gazprom's* "proved" reserves are valuated in accordance with SEC International Standards, whereas "probable" and "possible" reserves are valuated in accordance with PRMS International Standards.

### PRMS INTERNATIONAL STANDARDS

When assessing the recoverable reserves PRMS International Standards take into account not only the probability that hydrocarbons are present in a given geological formation but also the economic viability of recovering the reserves. Exploration and drilling costs, ongoing production costs, transportation costs, taxes, prevailing prices for hydrocarbons, and other factors that influence the economic viability of a given deposit are taken into consideration.

Under PRMS International Standards, reserves are classified as proved, probable and possible.

Proved reserves include reserves that are confirmed with a high degree of certainty through an analysis of the development history and/or volume method analysis of the relevant geological and engineering data. Proved reserves

are those that have a better than 90 % chance of being produced based on the available evidence and taking into account technical and ecnomic factors.

Probable reserves are those reserves, in which hydrocarbons have been located within the geological structure with a lesser degree of certainty because fewer wells have been drilled and/or certain operational tests have not been conducted. Probable reserves are those that have a better than 50 % chance of being produced based on the available evidence and taking into account technical and economic factors.

An evaluation of proved and probable natural gas reserves certainly involves multiple uncertainties. The accuracy of any reserves evaluation depends on the quality of available information and engineering and geological interpretations. Based on the results of drilling, testing, and production after the audit date, reserves may be significantly restated upwards or downwards. Changes in the price of natural gas, gas condensate or oil may also affect proved and probable reserves estimates, as well as estimates of future net revenues and present worth, because the reserves are evaluated based on prices and costs as of the audit date.

### DIFFERENCES BETWEEN PRMS INTERNATIONAL STANDARDS AND SEC STANDARDS

- Certainty of Existence. Under PRMS International Standards, reserves in undeveloped drilling sites that are located
  more than one standard interwell distance from a commercial producing well may be classified as proved reserves
  if there is "reasonable certainty" that they exist. Under SEC Guidelines, it must be "demonstrated with certainty" that
  reserves exist before they may be classified as proved reserves.
- Duration of License. Under PRMS Standards, proved reserves are projected to the economic production life of the evaluated field. Under SEC Standards, oil and gas deposits may not be classified as proved reserves if they will be recovered after the expiration of the license validity period unless the license holder has the right to renew the license and there is a demonstrated history of license renewal. The Subsoil Resources Law provides that a license holder shall be entitled to request an extension of an existing license where extractable reserves remain upon the expiration of the primary term of the license, provided that the license holder is in material compliance with the license agreement.

Gazprom prepares and submits for government approval development plans for its fields based on the economic life of the field, even where this life exceeds the primary term of the associated license. Gazprom is in material compliance with license agreements, and will be entitled to extend them to the full economic lives of the associated fields upon the expiration of their primary validity periods. However, the absence of an absolute legal right to extension and a significant demonstrated history of extension makes it uncertain whether extractable reserves Gazprom plans to recover after the expiration of a current license validity period may be considered proved reserves under SEC Standards. SEC experts have not provided definitive guidance on whether in these circumstances such extractable reserves could be considered proved under SEC Standards.

<sup>\*</sup> Any changes in gas condensate reserves due to production are recognized as converted into stable gascondensate (C<sub>5+</sub>). The production volume of unstable gas condensate of Gazprom Group see in Production section.

<sup>\*\*</sup> Under the law of the Russian Federation, the subsoil user does not have any vested right to develop reserves discovered in areas covered by exploration licenses or beyond the licensed areas. Such reserves shall be transferred to the Undistributed Subsoil Fund of the Russian Federation. Subsequently the subsoil user has a preference right to receive a license for their development.

<sup>\*\*\*</sup> Including licenses recived by Gazprom Group in previous years.

 $<sup>^{\</sup>star}$  Type of field is provided in accordance with the Russian state classification: OGC - oil, gas, condensate; OG - oil and gas; GC - gas condensate; G - gas; O - oil.

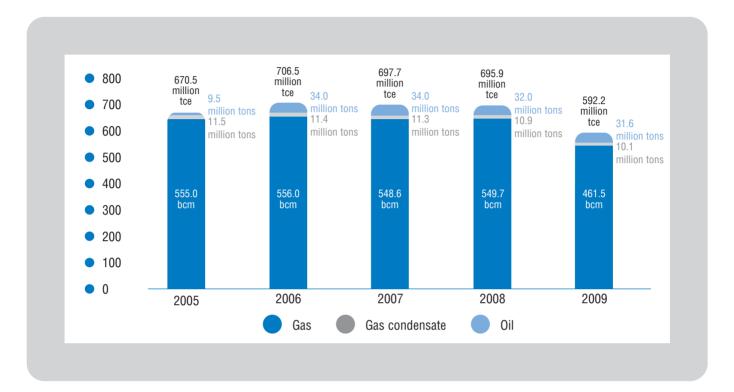

<sup>\*\*</sup> Russian legislation provides for several types of licenses applicable to the study, exploration and production of natural resources, including: licenses for geological exploration (EL); licenses for the development and production of hydrocarbons (PL); and licenses for exploration, development and production of hydrocarbons (EPL). Abbreviations are stated according to the classification determined by the Russian legislation.

<sup>\*\*\*</sup> The main part of licenses for exploration, development and production of hydrocarbons was received by *Gazprom Group* in 1993–1996 according to the Federal law "On subsoil". Their expiry period is mostly in 2012–2014. While license holders of *Gazprom Group* meet the main terms and conditions of license agreements, they have a right to prolong current licenses to complete exploration and development of fields. *Gazprom* plans to prolong licenses for the period till the completion of profitable development of fields.

<sup>\*\*\*\*</sup> A part of Gazprom Neft Group.

aggregate installed capacity, bcm per year	939.6	957.8	976.0	991.0	994.5
Booster compressor stations, units	44	44	45	45	47
Booster compressor stations					
installed capacity, MW	4,176.1	4,176.1	4,300.1	4,460.1	4,508.1

### MAJOR PROJECTS IN THE FIELD OF HYDROCARBON SEARCH, EXPLORATION, AND PRODUCTION IN FOREIGN COUNTRIES

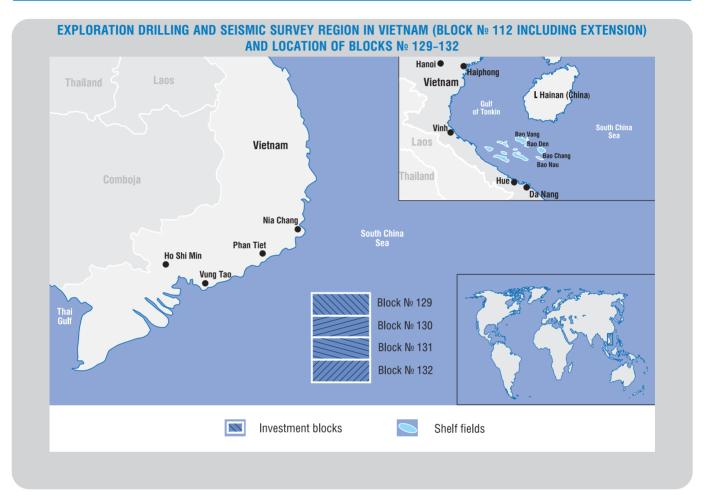

Country	Project name, purpose and description	Year of project start	Terms of participation in project	Project progress
Algeria	Hydrocarbon exploration and development in the onshore area El Assel located in the Berkine geological Basin in Algeria (licensed blocks 236b, 404a1, and 405b1).	2009	Group's project participant – subsidiary Gazprom EP International B.V. Partner – the Algerian state oil and gas company Sonatrach. Contractor – the Algerian National Agency for the Valorization of Hydrocarbon Resources (ALNAFT). Group's participation in project – 49 %. Gazprom Group plans to invest about US \$ 120 million into geologic exploration work under this project (2,700 square km of 3D seismic survey and drilling four exploration wells).	In 2009 3 D seismic survey was started.  2 D seismic works carried out in prior years were reprocessed and reinterpreted.  Preparation for exploration well drilling has begun.

Country	Project name, purpose and description	Year of project start	Terms of participation in project	Project progress
Venezuela	"Rafael-Urdaneta, Phase A" Project: geologic research and gas field development of the licensed deposits at blocks Urumaco-I and Urumaco-II in the eastern part of the Gulf of Venezuela.	2005	The <i>Group</i> established two companies Urdanetagazprom-1, S.A. and Urdanetagazprom-2, S.A. to implement this project.	Licenses for geologic research and gas field development at the blocks are valid for 30 years. In 2009 exploration well drilling at block Urumaco-I was completed. Analyses of obtained data is currently being carried out.
	Blocks Blanquilla and Tortuga	2008	Memorandum of understanding with Venezuelian oil an gas state company PdVSA.  Group's participation in project  at exploration stage – 30 %;  at production stage – 15 %.	The project execution scheme is currently under discussion. The project documentation is currently being prepared to file application for licence for geological exploration.
	Heavy oil development projects at blocks of Orinoco basin.	2009	OOO Natsyonalnyi Neftianoi Konsortsyum was established in Latin America to implement the project. The members of the consortium are russian oil and gas companies: OAO Gazprom Neft, OAO Lukoil, OAO NK Rosneft, OAO Surgutneftegaz and OAO TNK-BP, each of which equaly participating in project – 20 %.	To develop block Junin-6 the consortium jointly with Venezuelian oil an gas state company PdVSA established PetroMiranda joint venture. To participate in this joint venture the consortium paid the first part of bonus in the amount of US \$ 600 million to the Republic of Venezuela. Certification of block Ayacucho-3 is completed. Participation of the consortium in block development is under consideration.

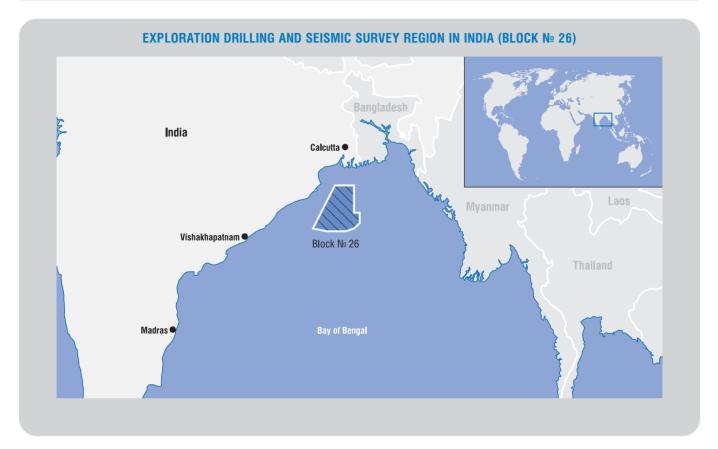

Country	Project name, purpose and description	Year of project start	Terms of participation in project	Project progress
Vietnam	Search, exploration, and sales of hydrocarbons on the Vietnamese shelf in accordance with the production sharing agreement.	Block № 112 – 2000 Blocks № 129–132 – 2008	Production sharing agreement. Project operator is joint operation company Vietgazprom. Group's participation in project – 50 %.	In 2007 the Bao Vang field was discovered within the block № 112. In 2009 three exploration wells were constructed. 5,214 m were drilled and 8,800 linear km of 2 D seismic work were carried out. In the result of works carried the Bao Den gas-condensate field with CO <sub>2</sub> highly concentrated gas and gas-condensate lays was discovered in Bak Bo bay, shelf of Vietnam. Geologic exploration works are scheduled to be completed in 2013.

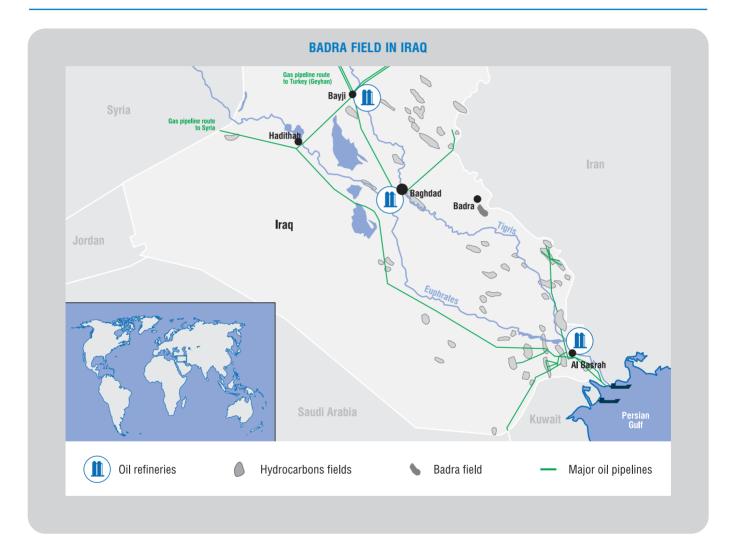

### **OAO GAZPROM** • GAZPROM IN FIGURES 2005–2009

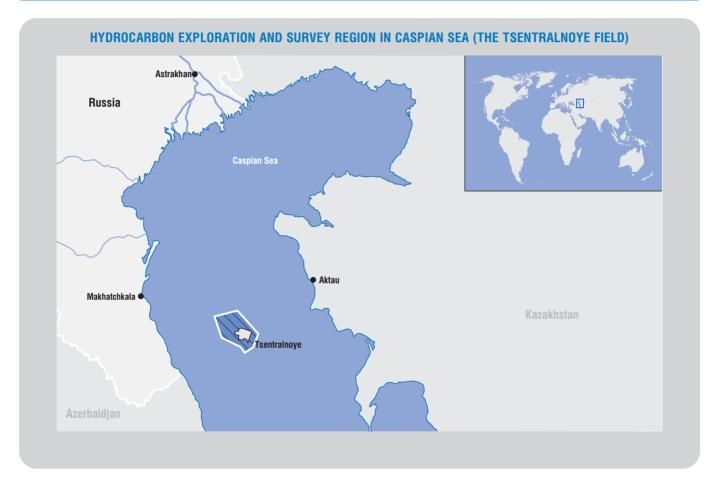

Country	Project name, purpose and description	Year of project start	Terms of participation in project	Project progress
India	Search, exploration and production of hydrocarbons in the block № 26 of the Indian continental shelf in the Bay of Bengal.	2000	Production sharing agreemement.  Group's participation in project – 100 %.	In 2009 2 D seismic survey, analisis and interpritation of 2 D results were complited. Preparation works for construction of exploration well with projected depth of 3,100 m were carried out. Exploration works at the block and valuation of reserves is scheduled to be completed in 2012.

Country	Project name, purpose and description	Year of project start	Terms of participation in project	Project progress
Iraq	Development of the Badra field.	2009	Project is implemented in the form of consortium where OAO Gazprom Neft acting as an operator. The rest participants are: Korean Kogas (22.5%), Malaysian Petronas (15%), Turkish TPAO (7.5%) and the government of Iraq (25%). Group's participation in project – 30 %. Total amount of consortium investments through the period of 20 years with a possibility of prolongation for five years is estimated at US \$ 2 billion. The peak production of 8.5 millon tons is going to be reached in 7 years.	Gazprom Neft Badra B.V., company- operator of the project was established and joint steering committee was created. As of December 31, 2009 reserves of the Badra fied were evaluated at more than 2 bln barrels of oil.

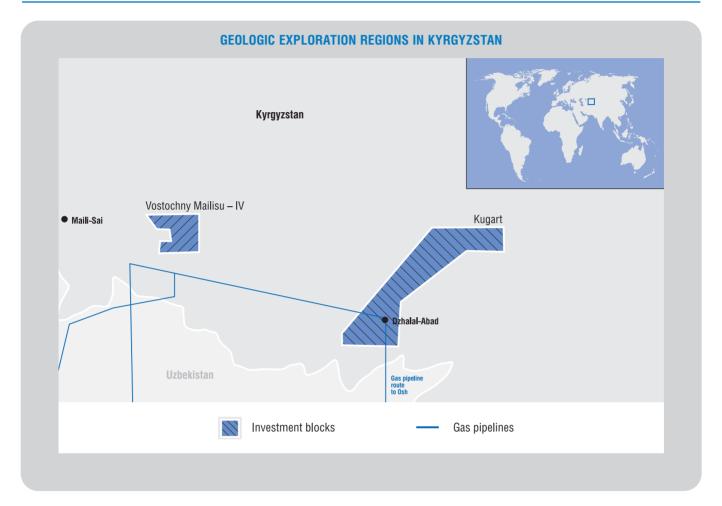

Country	Project name, purpose and description	Year of project start	Terms of participation in project	Project progress
Kazakhstan	Search and exploration of hydrocarbon resources in the geological structure Tsentralnaya in the Caspian Sea.	2003	Participant from the Russian side is 000 TsentrKaspNeftegaz which is created on parity basis by 0A0 Lukoil and 0A0 Gazprom. Participant from the Kazakhstan side is A0 National company KazMunaiGaz. 000 TsentrKaspNeftegaz and A0 National company KazMunaiGaz are participating on parity basis. Group's participation in project – 50 % at the stage of exploration.	In 2008 the Tsentralnoye field was discovered. Early in 2009 3D seismic survey was completed. The construction of the well $N_0$ 2 is scheduled for 2010. As of December 31, 2009 the Tsentralnaya field reserves amounted to: category $C_1 - 20.2$ million tce; category $C_2 - 149$ million tce.

Lybia	Search and exploration of hydro- carbons at licensed areas № 19 and № 64	2007	In project  Production sharing agreement with Lybian National Oil Company.  Group's project participant – subsidiary Gazprom Libya B.V.  Group's participation in project: Licensed area № 19:  At geologic exploration stage – 100 %; At production stage – 10 %. Licensed area № 64:  At geologic exploration stage – 100 %; At production stage – 9.8 %.  Share participation in concessions belonging to Wintershall AG (project operator) as a result of the completion of an asset swap transaction with BASF.  Group's participation in project – 49 %.  Geo bein Rem	Comprehensive interpretation of 2 D and 3 D seismic survey havs been completed, prospective objects were identified. Exploration wells drilling is scheduled for 3Q 2010.
	Search and exploration of hydro- carbons within concessions C96 and C97.	2007	belonging to Wintershall AG (project operator) as a result of the completion of an asset swap transaction with BASF.	Current oil production amounts to about 2.7–2.8 million barrels per moth. Works are being carried out to increase oil production at the existing fields.  Geologic exploration of new oil fields is being carried out.  Remaining extractable proved and probable reserves equals to 22 million tons of oil and 7.5 bcm of gas as of December 31, 2009.

Tajikistan	Geologic exploration work at Sarikamysh, Sargazon, Rengan, and Zapadny Shaambary oil-and-gas promising areas.	2006	Agreement on general principles for geologic exploration of oil-and-gas promising areas. Russian-Tajik Steering Committee was established to supervise the fulfillment of agreement provisions.	The licenses for subsoil use of Sarikamysh and Zapadny Shaambary were received.  3 D seismic survey, as well as preliminary works for construction of deep exploration wells at Sargazon and Sarikamysh fields were started.

Country	Project name, purpose and description	Year of project start	Terms of participation in project	Project progress
Uzbekistan	Search, exploration, and production of hydrocarbons in the Ustyurt region of the Republic of Uzbekistan (Shakhpakhtinsky, Agyinsky, Akchalaksky, Aktumsuksky, and Nasambeksky investment blocks).	2006	Project participants – NHK Uzbekneftegaz and OAO Gazprom. Project operator – ZAO Gazprom Zarubezhneftegaz.	Within the frameworks of license obligations fulfillment 7 wells had been constructed, 2 D and 3 D seismic surveys were carried out.  The Dzhel field at the Shakhpakhtinsky license block was opened. In 2009 the licences for blocks Urginsky (western part) and Kuanyshsky were abandoned because of unpromising outlook.
	Rehabilitation of the Shakhpakhty field infrastructure in Ustyurt region in the Republic of Uzbekistan and additional development of remaining gas reserves.	2004	The production sharing agreement was sighned between NHK Uzbekneftegaz and Consortium which includes Gas Project Development Central Asia AG (The <i>Group's</i> shareholding – 50 %) and ZAO Gazprom Zarubezhneftegaz. Project operator is 000 Zarubezhneftegaz – GPD Central Asia, created by Gas Project Development Central Asia AG and ZAO Gazprom Zarubezhneftegaz on parity basis.  Expenses are reimbursed by natural gas supply. After the reimbursement of expenses remaining gas is equally allocated between sharing agreement participants.	About 1.5 bcm of gas were produced from the Shakhpakhty field from August 2004 through March 2010 (0.3 bcm of gas in 2009).  Currently the project passed the pay-off period and the profit generated is allocated between sharing agreement participants.

# HYDROCARBON EXPLORATION, SURVEY AND PRODUCTION AREAS IN UZBEKISTAN (USTYURT REGION) Aral Sea Kazakhstan Kazakhstan

# **PROMISING FIELDS IN RUSSIA**

#### ALLOCATION OF MAIN PROMISING FIELDS OF GAZPROM GROUP IN RUSSIA

#### **GAZPROM GROUP'S MAIN PROMISING FIELDS IN RUSSIA**

Name of the field	Description	Projected capacity	Commissioning date	Period of projected capacity attainment
Nadym-Pur-Tazovsky Region (V	Vestern Siberia)			
Zapolyarnoye field (Cenomanian deposits)	Located close to <i>Gazprom's</i> major fields that are under development. The Cenomanian deposits were commissioned in 2001. In 2007 their projected capacity was rewised from 100 bcm to 115 bcm annually.	115 bcm of gas	2001	2013–2014
Zapolyarnoye field (Lower Cretaceous deposits)		15 bcm of gas	2010	2013–2014
Kharvutinskaya Area of the Yamburgskoye field	Located in the southern part of the Yamburgskoye field. It was commissioned in 1996. A preliminary gas treatment unit was commissioned in 2007 with an annual production capacity of 8.2 bcm.	30 bcm of gas	1996	2011–2012
Zapadno-Pestsovoe field (Bolshoy Urengoy)	Located westward of Pestsovaya Area of the Urengoyskoye field.	2.0 bcm of gas	2010	2011
Nydinskiy area of the Medvezhye field	Located at the Medvezhye gas-condensate field in Purovsky area of Yamal-Nenets Autonomous District, the Tyumen Region.	2.7 bcm of gas	2011–2012	2014

#### **OAO GAZPROM** • GAZPROM IN FIGURES 2005–2009

Name of the field	Description	Projected capacity	Commissioning date	Period of projected capacity attainment
Urengoyskoye field (Achimovsk Deposits)	The deposits are divided into several areas for their stage-by-stage development.			2016–2019
	The 1A area was put into test production in July 2008. The area is being developed by ZAO Achimgaz – a joint venture established together with Wintershall Holding AG.	7.7 bcm of gas and 3.0 million tone of unstable gas condensate annualy	2008 s	
	In 2009 block 2A was put into operation. The operator of the block is 000 Gazprom Dobycha Urengoy.	5.6 bcm of gas and 1.7 million tone of unstable gas condensate annualy	2009 s	
Yen-Yakhinskoye field	Effective from 2012, the field is planned to be developed using gas injection repressuring technology (cycling), that provides maximum level of gas condensate extraction.	1.8 million tones of gas condensate and 5 bcm of gas	2003	2007
Yuzhno-Russkoye field	Located in Krasnoselkupskiy township of the Yamalo-Nenets Autonomous District, the Tumen Region. OAO Severneftegazprom holds a license for its development. As of 31.12.2009 OAO Gazprom holds 50% plus 6 nominal shares, Wintershall Holding AG holds 25% minus 3 nominal shares plus 3 preference shares with no voting right, E.ON Ruhrgas holds 25% minus 3 nominal shares plus 3 preference shares with no voting right.	25 bcm of gas	2007	2010
Yamal Peninsula and adjacent w	aters			
Bovanenkovskoye field (Cenomanian and Aptian deposits)	Gazprom and the administration of the Yamalo-Nenets Autonomous District developed the Program for comprehensive commercial development of hydrocarbon deposits on the Yamal Peninsula and the adjacent waters. Due to demand fall it was decided to postpone commissioning dates of first launching systems of Bovanenkovskoye field and system of Bovanenkovo – Ukhta trunk pipelines from 3Q 2011 to 3Q 2012.	115 bcm of gas	2012	2017–2018
The Arctic Shelf				
Shtokmanovskoye field	It is located in the central part of the Barents Sea to the north-west from the Yamal Peninsula and 650 km to the north-east from the city of Murmansk. Natural gas is planned to be supplied both through the UGSS and as LNG to remote markets. Stockman development AG, a company of special purpose, was established in 2008 for development, construction, financing and exploitation of the first phase objects of the Schtockmanovskoe field. Its main shareholders are OAO Gazprom (51%), Total Shtokman B.V. (25%) and Statoil Holding Netherlands B.V. (24%).  The projected annual gas production amounts to 71 bcm and can potentially be increased to 95 bcm.	23.7 bcm of gas at the first stage of development	2016	First stage – 2017
Prirazlomnoye field	Located on the shelf of the Pechora Sea.	6.6 million tons of o	il 2011	2018
<b>Obskaya and Tazovskaya Bays</b> Severo-Kamennomysskoye field	Located in the middle part of Obskaya Bay in the Yamalo-Nenets Autonomous District, the Tumen region. It is idetified as priority object of development in water areas of Obskaya and Tazovskaya Bays.	15.3 bcm of gas	2018	2020
Volga Region				
Astrakhanskoye field	Located in the Volga estuary. It is capable of yielding a production volume of 50–60 bcm of natural gas per year. Currently, its production is constrained at 12 bcm per year mostly due to environmental limitations as well as the need to use expensive technologies. The possibility is being considered of field development using the technology of pumping acid gases into the reservoir, which will allow decreasing hazardous emissions considerably and eliminating problems related to the storage and sale of associated sulfur.	-	1986	-
Eastern Siberia and Russian Far				
Chayandinskoye field	Located in Lensk Region of the Republic of Sakha Yakutia. Currently a supplementary geologic exploration is being carried out and project documentation is being prepared that will result in establishing production levels of gas and liquid hydrocarbons.	N/A	According to the licence agreement the commissioning o oil fringe into operatic is scheduled for – 201 gas layers – 2020.	on

## **GAS TRANSPORTATION PROJECTS**

#### **EURASIAN GAS TRANSPORTATION SYSTEM**

#### **GAZPROM GROUP'S MAJOR GAS TRANSPORTATION PROJECTS**

Name	Purpose	Project parameters			Project progress	
		Length	Number of compressor stations (CS) / total capacity of CS	Annual capacity		
SRTO – Torzhok	Natural gas transportation from the fields located in northern areas of the Tyumen Region to the city of Torzhok that will make it possible to increase gas supply to the consumers in the Northwestern region of Russia and gas export through the Yamal-Europe pipeline.		13 CS / 968 MW	20.5–28.5 bcm per year at different parts	Linear part was commissioned in 2006. 10 compressor stations of total capacity of 743 MW had been constructed as of December 31, 2009. Three compressor stations will be commissioned together with commissioning of Bavanenkovo – Uhta gas pipline in 2012.	
Gryazovets – Vyborg	Gas supply to North-West of Russia and to Nord Stream gas pipeline.	917 km	7 CS / 1180 MW	59 bcm	604 km of linear part had been constructed as of December 31, 2009. The pipeline is planed to be commissioned in 2011 and to reach projected capacity in 2012 r.	
Nord Stream	Transportation of Russian natural gas to Western European countries under the Baltic Sea.	1,223 km	N/A	Up to 55 bcm	For engineering, building, operating and managing purposes Nord Stream AG company was founded. The shares in Nord Stream AG has been distributed in the following way:  OAO Gazprom – 51 %, Wintershall Holding AG and EON Ruhrgas – 20 % each, Gasunie Infrastruktur AG – 9 %. Negotiations on GDF SUEZ joining the project is currently at final stage.  As of February 2010, Nord Stream AG received all the necessary permissions to construct off-shore pipeline, from the number of countries, exclusive economic zones of which the pipeline will cross. In April 2010, the beginning of pipelaying operations was publicaly announced.  Commissioning of the first pipeline branch is scheduled for 2011; second branch – for 2012.	
Extension of UGSS for providing South Stream gas pipeline with gas	Gas transportation through the territory of Russia for providing South Stream gas pipeline with gas.	around 2,300 km	10 CS / 1,473 MW	Up to 63 bcm	Preinvestment studies are being carried out.	
South stream	Transportation of gas from Russia through the Black Sea and the territories of South and Central Europe.	approximately 2,200 km (main route)	N/A	Up to 63 bcm	Inter-Government agreements with Bulgaria, Serbia, Slovenia, Hungary, Greece, Croatia (02.03.2010) and Austria (24.04.2010) were signed. OAO Gazprom with partners conducts technical and economical explorations which will result in determination of system configuration and main technical and economical figures of the project.	
Expansion of Urengoy Gas Transportation Unit	Transportation of the increasing volumes of natural gas produced by <i>Gazprom</i> and independent producers at the fields that are under development in the Nadym-Pur-Tazovsky region.	approximately 400 km³	3 CS / 272 MW	40.3–47.5 bcm at different parts	410.3 km of the linear part of the gas pipelines and 3 compressor stations with capacity of 272 MW were commissioned.	
Precaspian Gas Pipeline	Transportation of Turkmen and Kazakh naural gas through the territories of Turkmenistan, Kazakhstan, and Russia.	N/A	N/A	Up to 20 bcm	In September 2008 OAO Gazprom, AO NK KazMunayGaz and GK Turkmengas signed an agreement on main principals of cooperation of Precaspean pipe line building, Regulation on coordinating committee and Regulation on project managing group. Basic task for project feasibility study and main input data for project were established.	

#### **OAO GAZPROM** • GAZPROM IN FIGURES 2005–2009

Name	Purpose		Project parameter	rs	Project progress
		Length	Number of compressor stations (CS) / total capacity of		
Murmansk – Volkhov Gas Pipeline	Supply of natural gas from the Shtokmanovskoye field to the consumers in the North-Western region of Russia and gas export within the Nord Stream project	1,365 km	10 CS / 1,225 MW	Up to 50 bcm (depending upon the production volume at the Shtokmanov- skoye field)	Gathering input data and its reconciliation have been completed. Engineering surveys are being done. Development of design documentation is being conducted.
Pochinki – Gryazovets	Opportunity to provide the Gryazovetsky gas transmission center with additional gas supply volumes and distribution gas flows after commissioning fields of Yamal Peninsula.	650 km	8 CS / 580 MW	Up to 36 bcm	298,3 km of the linear part of the gas pipeline and one compressor station with capacity of 96MW were commissioned as of the end of 2009. The first stage of pipeline construction is planned to be completed in 2012.
Bovanenkovo – Ukhta (the first branch)	Gas pipeline system for gas transportation from the Yamal Peninsula fields to central	1,100 km	9 CS /	60 bcm 1,096 MW	The facilities of the first stage of Bovanenkovo – Ukhta are planned to be commissioned in 2012, including
Ukhta – Torzhok (the first branch)	regions of Russia.	1,371 km	9 CS / 869 MW	45 bcm	a two-line underwater crossing through the Baydaratskaya Bay and CS with capacity of 96 MW. As of December 31, 2009, 426 km of the linear part of Bovanenkovo – Ukhta had been constructed, including first line underwater crossing through the Baydaratskaya Bay.
Sakhalin – Khaba- rovsk –Vladivostok (the first start-up facilities)	Meeting the demands of gas consumers in Khabarovsk and Primorsk territories and in Sakhalin region.	1,320 km	1 CS / 32 MW	6 bcm	The construction is planned to be completed in the 3Q 2011.
Sobolevo – Petropavlovsk- Kamchatsky	Gas supply to the Kamchatka Region from the fields on the west coast of Kamchatka Peninsula.	391 km	N/A	750 bcm	144 km of the linear part had been constructed as of December 31, 2009. The first stage of pipeline's construction is planned to be completed in the 4Q 2010.

#### GAS PROCESSING, OIL REFINING AND PETROCHEMICALS PLANTS

Name	Company	Location	Year of establishmet	Annual capacity of processing/ Product range production as of December 31, 2009	Product range
OAO Gazprom and it	s major subsidiaries	with 100% equity pa	articipation		
Astrakhan gas processing plant (GPP)	000 Gazprom dobycha Astrakhan	Astrakhan	1986	<ul> <li>12.0 bcm of natural gas</li> <li>7.3 million tons of gas condensate and crude oil</li> </ul>	Dry natural gas, stable condensate, liquefied gas, wide fraction of light hydrocarbons (WFLH), gasoline, diesel fuel, heating oil, sulfur
Orenburg GPP	000 Gazprom dobycha Orenburg	Orenburg	1974	<ul> <li>37.5 bcm of natural gas</li> <li>6.2 million tons of gas condensate and crude oil</li> </ul>	Dry natural gas, stable condensate, liquefied gas, WFLH, gas sulfur, odorants
Orenburg helium plant	000 Gazprom dobycha Orenburg	Orenburg	1978	• 15.0 bcm of natural gas	Helium gaseous and liquefied, dry natural gas, liquefied gas, ethane, WFLH, PHF
Sosnogorsky GPP	000 Gazprom pererabotka	Sosnogorsk, Komi republic	1946	<ul><li>3 bcm of natural gas,</li><li>1.25 million tons of unstable condensate (deethanization)</li></ul>	Dry natural gas, stable gas condensate, liquefied gas, motor gasoline, technical carbon
Urengoy condensate preparation plant	000 Gazprom pererabotka	Urengoy	1985	<ul> <li>13.9 million tons of unstable condensate (deethanization and stabilization)</li> </ul>	De-ethanized gas condensate, stable gas condensate, liquefied gas, motor gasoline, diesel fuel, gas condensate light distillate (GCLD)
Surgut condensate stabilization plant	000 Gazprom pererabotka	Surgut	1985	<ul> <li>8.05 million tons of unstable condensate including deethanized (stabilization)</li> </ul>	Stable gas condensate (oil), motor gasoline, diesel fuel, TS-1 engine jet fuel, liquefied gas, WFLH, PHF, GCLD
Methanol production plant	000 Sibmetahim	Tomsk	1983	• 750 thousand tons of methanol	Methanol, formalin, amino-formaldehyde resin
Gazprom Neft					
Omsk oil refinery	OAO Gazprom Neft	Omsk	1955	• 19.5 million tons of oil	Motor and technical gasoline, diesel fuel, jet fuel, heating oil, lubricants, aromatic hydrocarbons, hydrocarbon liquefied gases, oil bitumens, sulphur
Moscow oil refinery	OAO Moscow Oil Refinery	Moscow	1938	• 12.15 million tons of oil	Motor and technical gasoline, diesel fuel, jet fuel, heating oil, oil asphalt, hydrocarbon liquefied gases, sulphur
Oils and lubricants producing plant in Bari	Gazpromneft Lubricants Italia S.p.A.	Bari (Italy)	1976	<ul><li>30 thousand tons of oils</li><li>6 thousand tons</li><li>of lubricants</li></ul>	Motor and technical oils, lubricants
Oil refinery in Panchevo	NIS	Panchevo (Serbia)	1968	• 7.3 million tons of oil	Motor and technical gasoline, diesel fuel, jet fuel, heating oil, odorants, hydrocarbon liquefied gases, liquid bitumens, sulfur, propylene
Oil refinery in Novi-Sad	NIS	Novi-Sad (Serbia)	1968		Motor gasoline, diesel fuel, heating oil, lubricants, liquid bitumens
More than that Gazr	orom Group has an acc	cess to canacities o	f OAO Slavneft-Ya	roslavnefteorgsintez according to equit	v participation in OAO NGK Slavneft
Name	Company	Location	Year of establishmet	Annual capacity of processing/ Product range production as of December 31, 2009	Product range
Yaroslavnefte- orgsintez	OAO NGK Slavneft	Yaroslavl	1958–1961	• 15.2 million tons of oil	Motor and technical gasoline, diesel fuel, jet fuel, heating oil, lubricants, odorants, sulfur, sulphuric acid, paraffin and wax products

## **ELECTRIC POWER AND HEAT GENERATION**

# SALES OF CRUDE OIL, GAS CONDENSATE AND REFINED PRODUCTS

#### GAZPROM GROUP'S SALES OF CRUDE OIL AND GAS CONDENSATE

		For the year ended December	31,
	2007	2008	2009
Crude oil and gas condensate sales volumes, million tons			
Russia	7.3	11.8	9.7
Far abroad	15.6	16.7	16.0
FSU countries	2.5	3.3	3.3
Total	25.4	31.8	29.0
Sales of crude oil and gas condensate			
(net of VAT, excise tax, and customs duties), million RR			
Russia	47,129	81,468	56,771
Far abroad	117,148	161,389	131,714
FSU countries	19,586	26,570	26,562
Total	183,863	269,427	215,047
Sales of crude oil and gas condensate			
(net of VAT, excise tax, and customs duties), million US \$*			
Russia	1,919	2,773	1,877
Far abroad	4,772	5,493	4,356
FSU countries	798	904	878
Total	7,489	9,170	7,111
Sales of crude oil and gas condensate			
(net of VAT, excise tax, and customs duties), million euro*			
Russia	1,312	1,966	1,308
Far abroad	3,260	3,895	3,036
FSU countries	545	641	612
Total	5,117	6,502	4,956

<sup>\*</sup> Data is not a part of financial statements. Calculated based on exchange rate as of the end of respective period.

#### **GAZPROM GROUP'S SALES OF REFINED PRODUCTS**

		For the year ended December	31,
	2007	2008	2009
Refined products sales volumes, million tons			
Russia	23.2	25.0	24.9
Far abroad	16.7	14.7	15.8
FSU countries	5.4	3.9	3.8
Total	45.3	43.6	44.5
Sales of refined products			
(net of VAT, excise tax, and customs duties), million RR			
Russia	304,319	378,182	297,885
Far abroad	183,167	229,794	206,669
FSU countries	42,181	44,980	35,951
Total	529,667	652,956	540,505
Sales of refined products			
(net of VAT, excise tax, and customs duties), million US \$*			
Russia	12,396	12,873	9,851
Far abroad	7,461	7,821	6,834
FSU countries	1,718	1,531	1,189
Total	21,575	22,225	17,874
Sales of refined products			
(net of VAT, excise tax, and customs duties), million euro*			
Russia	8,470	9,127	6,865
Far abroad	5,098	5,545	4,763
FSU countries	1,174	1,085	829
Total	14,742	15,757	12,457

# SALES OF ELECTRICITY AND HEAT ENERGY, GAS TRANSPORTATION SALES

#### **GAZPROM GROUP'S SALES OF ELECTRICITY AND HEAT ENERGY**

	For the year ended December 31,		
	2007	2008*	2009*
Electricity sales volumes, billion kWh	32.2	108.0	135.7
Heat energy sales volumes, million Gcal	29.4	67.0	73.5
Sales of electricity and heat energy (net of VAT),			
million RR	49,284	134,334	195,040
million US \$**	2,007	4,572	6,450
million euro**	1,372	3,242	4,495

<sup>\* 2008</sup> and 2009 electricity and heat energy sales are provided net of Gazprom Germaniya Group's trading operations without actual delivery.

#### **GAS TRANSPORTATION SALES**

	For the year ended December 31,			
	2007	2008	2009	
Gas transportation sales to companies other				
than Gazprom Group's companies, bcm	106.1	111.2	60.0	
Gas transportation sales (net of VAT)				
million RR	41,740	63,468	47,029	
million US \$*	1,700	2,160	1,555	
million euro*	1,162	1,532	1,084

# ENVIRONMENTAL MEASURES, ENERGY SAVING, RESEARCH AND DEVELOPMENT

#### KEY INDICATORS OF GAZPROM GROUP ENVIRONMENTAL IMPACT

	For the year ended December 31,		
	2008	2009	
Hazardous atmospheric emission, thousands tons	3,340.7	3,391.1	
including:			
carbon oxidise	785.5	645.8	
nitrogen oxidise	339.4	335.9	
sulfur dioxide	248.6	249.1	
hydrocarbons (including methane)	1,712.4	1,859.8	
Discharge of waste water, mmcm	4,115.9	5,336.3	
including those into surface water objects	3,895.1	5,175.9	
among them waste water purified at sewerage			
treatment facilities according to standards	3,853.1	5,031.3	
Waste production, thousands tons	4,084.5	5,210.8	
Restored soil, thousands ha	8.3	12.6	

#### GAZPROM GROUP'S ENVIRONMENTAL COSTS, MILLION RR

	For the year ended December 31,	
	2008	2009
Current expenditures	17,162	10,376
Expenditure on refurbishment of fixed assets		
related to environmental protection	1,429	963
Payment for environmental pollution	2,679	1,218,
Capital expenditures related to environmental protection		
and rational use of natural resources	3,494	6,324
Total	24,764	18,881

#### **ENERGY RESOURCE SAVING OF OAO GAZPROM AND ITS MAJOR 100% SUBSIDIARIES**

	For the year ended December 31,					
	2005	2006	2007	2008	2009	
Natural gas						
mmcm	3,362.5	3,603.5	3,062.8	2,357.4	2,179.3	
thousand tce	3,833.3	4,108.0	3,491.6	2,687.5	2,484.4	
Electric power						
million kWh	546.4	292.9	271.9	250.8	171.6	
thousand tce	148.0	95.2	88.4	81.5	55.8	
Heat power						
thousand Gcal	374.3	231.7	191.3	204.3	180.4	
thousand tce	46.8	33.1	27.3	29.3	25.8	
Total*, thousand tce	4,028.1	4,236.3	3,607.3	2,798.3	2,566.0	

<sup>\*</sup> Excluding energy saving of other resources.

#### RESEARCH AND DEVELOPMENT WORKS CONTRACTED BY GAZPROM GROUP

	For the year ende	d December 31,
	2008	2009
Research and development, bln RR (excluding VAT)	4.9	7.4

# **PERSONNEL**

#### **GAZPROM GROUP'S AVERAGE NUMBER OF EMPLOYEES**

		For the year ended December 31,				
	2005	2006	2007	2008	2009	
Average number of employees, in thousands	396.8	432.2	436.1	456.2	383.4	

#### PERSONNEL STRUCTURE OF GAZPROM GROUP

	For the year ended December 31,	
	2008	2009
Number of employees as of year-end, in thousands including:		
OAO Gazprom and its major subsidiaries with 100% equity participation	234.6	236.9
Gazprom Neft Group	48.2	62.2
Other subsidiaries	93.5	94.5
Total	376.3	393.6
including by categories:		
management	11.6 %	12.3 %
specialists	22.6 %	23.5 %
workers	61.8 %	61.6 %
other employees	4.0 %	2.6 %
including by age:		
under 30 years	16.7 %	18.7 %
30–40 years	27.1 %	26.6 %
40–50 years	32.8 %	30.6 %
50 years	23.4 %	24.1 %

 $<sup>^{\</sup>star}$  Состав учитываемых обществ приведен в Глоссарии.

#### **EDUCATIONAL LEVEL OF EMPLOYEES OF GAZPROM GROUP**

	For the year ended December 31,	
	2008	2009
Management		
higher and post graduate	79.3 %	80.8 %
specialized secondary	18.3 %	17.0 %
secondary	2.4 %	2.2 %
Specialsts		
higher and post graduate	75.8 %	78.7 %
specialized secondary	20.7 %	18.4 %
secondary	3.5 %	2.9 %
Workers		
higher and post graduate	12.7 %	13.1 %
specialized secondary	25.9 %	26.7 %
secondary	61.4 %	60.2 %

# **CONVERTION TABLE**

Correspondence
35.316 billion cubic feet (bcf) of natural gas
0.028 bcm of natural gas
1,000 kilos, 2,204.6 pounds, 7.33 barrels of crude oil
8.18 barrels of gas condensate
0.1364 metric ton of crude oil
0.1222 metric ton of gas condensate
Approximately 0.62 miles
867 cm of natural gas, 0.7 ton of gas condensate, 0.7 ton of crude oil
1.154 tce
1.43 tce
1 barrel of oil equivalent (boe)
5.89 barrels of oil equivalent (boe)

# **GLOSSARY OF BASIC TERMS AND ABBREVIATIONS**

Terms and abbreviations	Description
ADR	American depository receipt
bcm	Billion cubic meters
boe	Barrel of oil equivalent
CS	Compressor Station
Dollars, US \$	U.S. dollars
Far abroad	Foreign countries, excluding FSU Countries
FSU Countries	Republics of the former USSR, except for the Russian Federation.
Gas cubic meter	Cubic meter of natural gas as measured at a pressure of
	one atmosphere and 20°C
Gasification	Construction of low-pressure gas pipelines to ensure gas supply
	to the ultimate consumers
Gazprom Group, Group, Gazprom	OAO Gazprom (head company) and its subsidiaries taken as a whole.
GCLD	Light distillate of gas condensate
GPP	Gas processing plant
GPU	Gas pumping unit
Hydrocarbon reserves (categories A+B+C <sub>1</sub> )	Explored reserves, according to the Russian reserves system.
,,	Gas reserves in categories ABC <sub>1</sub> are considered to be fully extractable.
	For reserves of crude oil and gas condensate, a predicted coefficient
	of extraction is calculated based on geological and technical factors.
Hydrocarbon reserves (categories C <sub>1</sub> +C <sub>2</sub> )	Category C <sub>2</sub> represents reserves of a deposit the crude oil or gas content
, a. ooa. 20 1000. 100 (catogo00 0102)	of which is calculated on the basis of geological and geophysical data within
	the known gas areas. Category C <sub>2</sub> reserves are preliminary estimated reserves
	and represent a basis for exploration work at a particular field.
kWh	Kilowatt-hour
LNG	Liquefied natural gas
LSE	London Stock Exchange
mcm	Thousand cubic meters
MICEX	MICEX stock exchange
mmcm	Million cubic meters
OAO Gazprom and its major subsidiaries	OAO Gazprom and its gas production, transportation and storage subsidiaries
